ok heres the deal i got this whole album on my pc but every song is named like this

1-(songname).mp3
2-(songname).mp3
3-(songname).mp3

the point is it takes to much time going to every single file (over 1000) and renaming every single file to have the artist name in front of the songs name.........is there a program to do this?

I actually wrote a program a few weeks ago that does exactly this. It reads the information from the ID3 tags and uses that to get the artist, album, title, etc.
It only works with mp3 & wma at this point, though.

I'll gladly send you it if you'd like, simply PM me your MSN/email and you'll have it asap.

Throw them in iTunes. It will read the ID3 tags on all the albuns and retrieve the information from

---

the internet. However, not all songs have ID3 tags so some may not change at all.

well they are all in a folder none ripped and just have like all the name of song in each song but no artist name just other stuipid crap i want it like this

slipknot - duality.mp3
not

track-6-duality-2007.mp3

and have to reanme ALL 4000 of my songs /;

and ******** itunes i hate that software
