[View Forum Message](#) <> [Reply to Message](#)

---

scripts.dll 3.4.2 is out  
get it from <http://www.sourceforge.net/projects/rentools/>  
It is basically a small bugfix release to fix a couple issues that have come up whilst testing the latest internal beta build of RA:APB  
Of note for normal renegade users is that it may solve some of the "I get crappy FPS with 3.x issues".  
Improvements to the calculation of the Binormal data which makes it faster  
Changed the calculation of BaseVertexIndex to make it better  
Small fix to some debug code in engine\_common.cpp  
Small fix to Buffers\_Apply in engine\_3d.cpp  
Corrected an issue in engine\_obj2.cpp raised by Prefast  
Fixed an issue with JFW\_Radar\_Jammer  
Made JFW\_Time\_Remaining\_Sounds not trigger if the time is set to "unlimited"  
Fixed a bug with the ExpVehFac scripts and vehicle alternates  
Corrected some issues in the memory leak detection code  
Corrected a crash bug in SceneShaderControllerClass::OnCustom  
Corrected a bug in shaderhud.cpp  
Added code to speed up rendering in certain places  
Disabled a spurious warning in shawk.cpp

There are a few mistakes in shaders.dll for drawing the custom HUD..

---

[http://www.renegadeforums.com/index.php?t=msg&goto=273565&rid=4090&srch=jonwil#msg\\_273565](http://www.renegadeforums.com/index.php?t=msg&goto=273565&rid=4090&srch=jonwil#msg_273565)

I could also donate my code to make the armor/health numbers flash in a customized HUD and/or the ability to read all the information for each map's scrolling radar texture in a single file and/or a fix for the glitch where your renegade crashes/shows incorrect radar textures when you don't have scrolling data for a map. If you'd want it, that is.

Also, when you enable customized time and/or credit messages, the default westwood logic is not disabled and is still drawn on top where it normally is. Would there be any way to disable this?

In the future do you think it might be possible to customize drawing the playerlist as well?

I'd like to thank you for all of your hard work on this. =)

I just played with them for about an hour and a half. It seems that my FPS is about at a constant 55-65 FPS, which is an improvement from my 20-40 FPS. But every 10 min or so, my FPS slows down to like 6 and stays that way for like 10-20 seconds.

During this time it is almost impossible to do anything!

I hope it is just the server I was playing on.

---

The HUD bug from that thread is fixed, all places in the code now use ScreenResolution->Right for x position and ScreenResolution->Bottom for y position.

Look for HideBottomText to turn off the time remaining and credits.

cmatt42, try the latest drivers for your video card. That looks like either a driver issue or a hardware issue.

One way of checking if it's the video card is to run ATITool and use "Scan for artifacts" for a couple of minutes.

<http://www.techpowerup.com/atitool/>

Anyway to use this without the engine hooks?

Like, say i just want the custom scripts, and none of the shaders, etc..?

So much for "I'm not making another scripts.dll for awhile", huh?

I guess you just didn't want to include the custom Roleplay 2 scripts, because they weren't important enough to be included with a release for the ALMIGHTY A PATH BEYOND.

I'm disappointed.

Okay that that your texture filter is set to Trilinear, I have noticed that the shader effects act differently under Bilinear. For example: if it is set to Bilinear it seemed to Improve the problem I was having with my "blast doors glitch" but who know, it could also cause problems with Alpha blend and stuff. Also make sure that the Lighting Mode is set to Multi-Texture Lightmaps. And

---

keep in mind that some times when renegade crashes it will knock the the texture filter down to Bilinear and probably the same for the lighting mode.

This release was solely a bug fix release designed to get a couple of little bug fixes out.

What I really meant was that I was not doing a new feature release of scripts.dll (i.e. a version that would be labeled 3.5)

One way of checking if it's the video card is to run ATITool and use "Scan for artifacts" for a couple of minutes.

<http://www.techpowerup.com/atitool/>

I updated yesterday when Paradox told me about it. They were just released in the last few days.

Also, it looks like Slave has the same problem, so it's not a fluke.

That's alot=P. jonwil do you think you can take a look at JFW\_Vehicle\_Extra\_Attach in the future:/? I'll be using this and it'd be nice if it's fixed. I talked to you on msn about it, but as a reminder, it does not transfer damage from the attached object to the main object and the enemy team can get in the attached object as well. It's almost like it doesn't work at all. I entered the id from the preset when you click mod as you said to=P.

I am planning a 3.4.3 bugfix release to fix what seems to be a z-fighting issue on certain combinations of ATI drivers/cards (which the devs don't have and couldn't test on). Then after that, I will be devoting most of my time to C&C3 for a while (I will still help out with questions and such, I am just not going to actually release a 3.5 scripts.dll release at this time)

As for the people who have written scripts, you could always release your own build of scripts.dll (its not hard to do

This doesn't mean that I have left the renegade community for good, I do intend to come back. Exactly when I don't yet know.

Blasphemy! Vloktbokty is one of the earliest Ren modders. He figured out much serverside code before other modders, and he worked on the original versions of SSAOW and Dragonade along with Whitedragon. All the KAK scripts in scripts.dll are his. He stopped coding for Black-Cell a while back, and has done a few things like RenDEC and RenLUA since then, but I'm not sure if he'd have time to do scripts.dll while he's focusing his efforts on Command & Crysis: The Dead 6, nor am I sure if he's even interested in the Renegade engine anymore. You can send him a PM or I can ask him when he shows up in IRC tomorrow, but I'm guessing he won't do it.

Whats left of it will be waiting, because with out new script package releases it won't last much  
longer. And how is SH supposed to incorporate his new lighting system into renegade?

shaders.dll plugin

JohnDoe wrote on Wed, 15 August 2007 09:44That sucks, what happened to that screenshot of  
an SBH on Under with nice shiny metal effects? Will that stuff ever get released?

---

Soon.

Hello all,

Havoc forwarded me this link. Thank you for putting my name out there, sn1per. Unfortunately, my career and my devotion to C&C: The Dead 6 have thoroughly devoured any free time I could invest in such a project. I owe a lot to this game and naturally I'd love to see it progress; however, I feel my time would be better spent developing newer technology to encapsulate and expand the gameplay made famous by this game.

Good luck jonwil and all.

I found some problems while working on a HUD. I started making it with version 3.4.1 and the problems are still there with this new version.

1) QuadNXPos and QuadNYPos are reversed, the X is actually Y and the Y is X.

2) The QuadNTop, QuadNLeft, QuadNBottom & QuadNRight functions are broken. They don't use the values I give them in the right way, like the QuadNBottom value should be in pixel but if I give it my texture height it crops it, I need to put a higher number than the real texture height. Also, my texture's proportions are never respected, it always try to make it square-shaped even if I use a rectangular shape (width higher than height). I also tried to stretch it horizontally but nothing changes. It's like the height and the width have a relation. I tried to stretch it to 192x45 (the original texture is 96x45) and it shows it exactly the same, I just need to set the Bottom and Right with the same number (like 96) and it shows it fully but as a square, otherwise if I'm using the correct resolution it will cut the texture.

Also, all the next Quad's are working differently, like the second being stretched 4x vertically.

Am I doing something wrong?

If you need more info just let me know.

EDIT:

I forgot to mention that I'm just using hud.ini with Renegade, and the texture format is either hud or tga, I get same results.

The code is fucked up yes, make sure that your textures have the same height and width. If you'd like for me to fix these bugs I could make a custom shaders.dll for you(I made one for myself that fixes a few things and adds new stuff too) but it might take a little while.

Tunaman, could you please post the source changes to your shaders.dll (i.e. the edited shaderhud.cpp etc). I want to look at what you changed.

I obviously meant dds not hud lol sorry.

I'd appreciate it, but as jonwil requested your code and is willing to fix this stuff, I'd like to have a public version of the scripts fixed and working, so I can just tell everyone "get the latest scripts to make this hud working" .

If you have 1 already compiled then post it, I can use it until the official scripts gets fixed.

Thanks.

It's more important that the image dimensions are powers of two than the same width and height. Powers of 2 are 1,2,4,8,16,32,64,128,256,512,1024,2048,etc etc etc. Mix and match any of them at will.

I know that, the code in shaderhud.cpp takes the width(I believe) and assumes that the height is the same.. I figured this out the hard way. :\ I don't know why I said the code was all messed up though, I guess I was kinda tired and in a hurry.

I want to clean up my code a little bit and then I'll post the source. ^^

So i'll maybe need to add pixels to the textures so they can be square-shaped and with a power of 2 width and height to fix it?

well i don't think any current hardware will support textures so big anyway lol.  
Should be 2048 for dx9 cards.

Should be 2048 for dx9 cards.It has nothing to do with DirectX. nVidia cards since the GeForce 3 could support up to 4096 x 4096. ATi cards haven't been able to until the Radeon X1x00 series.

Any high-end card from at least the last 4 generations, and any mid-range card from at least the last 2 or 3 generations, should be able to run Renegade at higher resolutions, and if it's not bottlenecked by a 128-bit memory bus (not sure if the latest mid-range cards still use that or if it's bumped up to 256-bit), then you'll be able to use high levels of AA and AF as well. As long as you're not buying a dinosaur, any video card these days will handle Renegade no problem.

I just noticed that I'm now getting Z-buffering issues with decals showing over walls from other walls behind them. Some parts of the map show up as well.

Also, my brother suddenly sees mostly black in game after installing the scripts on our laptop.  
[edit] Downgraded to 3.4.1, didn't fix it.

Yes, the problem is to do with scripts, as 2.9.2 scripts.dll shows the console text ok, its just the earlier versions of 3.0 that do not show the console text under Vista, due to some changes in how DX9 functions are handled under Vista (or something like that, saberhawk explained it to me a while back but I don't really remember exactly what he said )

---
