i cant find this whats the html code that it shows a menu and where u click on it u click on a link that takes u to a site to show a picture?

i found one code that made a menu and when u go to it expands to a bunch of text but i want one u can click on that takes u to a location?

any one?

uhm I'm not sure what you exactly want, but you go to a new location with the a tag.

click me

Std HTML menus are made from simple graphics, which are made into links. This is simply accomplished by:

<img src="http://SITE.com/IMAGELOCATION.jpg" width="000" height="000">

The <a> tag is for the link, just put the link destination where it says http:// URL.com, make sure to include the ". Putting the image tag after the <a> tag makes the image turn into the link. Then don't forget to close the tag, and voila, an image link.

Not sure if this is what you wanted, but it's what I got for ya, if you have any more specific questions, ask. Otherwise, it's kinda hard to interpret exactly what you want when you ask a question like "What's that code for that link where theres image and like text n stuff?"

I don't think he would see anything with an image width and height of 0 px

Obviously it's just an example, you're supposed to supply in the actual dimensions of the image.

Yep, but I don't think he would think about that if you don't exactly tell him how to get the size of an image and that he has to set it
