well this weekend me and like 10 of my cousins got renegade..
and i was wondering if theres a way to make a private server online were we can play only us.
how?

Host a non-dedicated server and get everyone to connect.

Wrong section, someone please move this to Win32 FDS.
First, download this: Renegade Free Dedicated Server 1.037
Then, take a look around this website, there should be some tutorials: RenegadeWiki

EDIT: What Mero said is the much less complicated way, I mis-read the topic. This should go in Renegade Client OR Win32 FDS.

Simply use the password feature. If your all playing from the same place your good to go. If your in different locations you may run into bandwidth issues.

There are plenty of servers on WOL, I'm sure you can find something that meets your needs.

wow you must have never played renegade before, just start a lan game if you are all in the same house using same internet, or login to multiplayer and then hit host game, then pick your settings, set a password, and wait for them all to join.

Or why not join one of the bigger servers all together?

You be most welcome in MP-Gaming.com OmegaAOW

perhaps because he wasn't looking for that? I presume he has played it a couple of times over the internet, right?

hello mr. pro i just bought the game.. and yes i have played it before. first of all im here to get help and step by step, you are giving me instructions like im a pro at this.
I live in CALIFORNIA and the rest of the people are in MEXICO i want to play with them in a private server just us. And i dont know how to make one. or to do it. i know how to log in online.

Login to WOL -> "advanced game listings". You will get the list of servers. Ignore it but check at the bottom right for "host a game". Check the different settings, they should be pretty straight forward. Do not forget to uncheck "dedicated server", otherwise u won't be able to play yourself. You can put a password on it as well.

Then start the game and wait until your friends join.

Attention:

- if your upload speed isn't big enough, then all your friends will lag like hell. Get the one with the best internet connection/computer to host;
 - if you have a router, then it might be some people can't join in "negotiating port with server error". Get someone with a USB modem to host then or learn how to forward ports.
-
