I'm trying to make a computer screen switch between 4 pictures. How is it done... I see a tutorial but I still can't get it.

You put the pictures in a folder, then click the first one, then find the slide-show button (F11), it'd automatically switch between pictures. There's also powerpoint.

Ha ha but seriously now. Theres a reason I posted this in renegade mod help forum instead of the Technical Support forums.

I followed that tutorial but my texture doesn't work like an animation it moves from left to right then from top to bottom, and it slides instead of actually changing pictures.

Like it goes from the left side of the texture then slides to the right side instead of actually starting on one frame and then going to the next it slides.

I never got that tutorial to work either. Same thing happened to me.

Animate the positions(of the gizmo), select the key frames, go to the animation tab (looks like a wheel moving) and set the "in" and "out" params to the image with straight corners and dotted lines.

Hmmm. What i said can only be done on the entire object's animation keys, not the modifier keys.
