all i can say is that my server crashes randomly.  
people can join and play, but after a few seconds the server crashes.  
it sometimes waits till it switches maps to crash.  
there doesnt seem to be any set action or command that crashes it, it just... crashes.  
i cant find the crash dump file.  
id really like to fix this problem, so post here or join me on irc: irc.aohost.co.uk #qwertwertserv  
thanks

P.S. the crashes are RANDOM.

Try reinstalling it to a different directory. This was a fix I heard was supposed to work in another post I saw here.

lol so perfect, now it just crashes randomly PERIOD. with or without people in it.

i didnt touch anything either, it was just sitting there, and crashed.  
nothing was on the console that was unusual.

i found the mass of crash dump files if anyone wants to get a massive headache reading them.  
theres quite a few O.o

um well update!

this is what i see on my FDS console:

Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""  
Recieved ""

repeat to infinity and beyond....

Im guessing this ISNT normal LOL

Well, you're using the LUA Plugin, so maybe it's an issue with one of your scripts. The only other thing I can think of is UDP Flooding.

The crashes are occurring in the LUA plugin.
