This is an application that came out of my dislike for the Direct Connect program packaged with the new APB Beta. It launches the official servers in one click, as well as TS (if it is installed) and your default IRC client (if installed)

Download it at my FileFront, located at

http://files.filefront.com/A+Path+Beyond+L...;/fileinfo.html

Feel free to host it elsewhere.

APB Launcher requires the Microsoft .NET framework 2.0.

It can be downloaded through Windows Update. Alternatively,

Download the framework Here for computers with x86 architecture (most computers)

Download the framework Here for x64 machines.
