Intro.

If Im running FDS on my PC, I cant play on it via gamespy, because the game determines the other active copy of game.

Solution.

1. Open your GameSpy folder (e.g. C:/Program Files/GameSpy Arcade)
2. Go to Services folder
3. Open full.cfg
4. Find the text string (it is 16 lines downwards tag [ccrenegade])

```
jointemplate=#EXEPATH# +connect #SERVERIP#:#SERVERPORT# +NetPlayerName  
"#PLAYERNAME#" [$SERVERPW$ +pass #SERVERPW#]
```

5. Replace it with the following

```
jointemplate=#EXEPATH# /multi +connect #SERVERIP#:#SERVERPORT# +NetPlayerName  
"#PLAYERNAME#" [$SERVERPW$ +pass #SERVERPW#]
```

5. Save the file.

The goal is to add /multi parametr to command line, this will allow running 2 or more games simultaneously on the same PC.

AFAIK, if you run the FDS on your home computer you can still load up renegade as normal. I wouldn't advise trying to play renegade while hosting a FDS on your home computer.

Caveman some FDS already have a patched server.dat which automatically applies /multi to it.

Ya, or just add +multi to the end of the target location of your renegade shortcut

Ya, or just add +multi to the end of the target location of your renegade shortcut

Which is what the first post states.

I'll quote a line from the first post.

Quote: The goal is to add /multi parametr to command line, this will allow running 2 or more games simultaneously on the same PC.
