Does anyone know what you have to do to get scripts.dll to compile on vista?

See, I upgraded to vista about 3 days ago and I can't compile my scripts any more, I get this error:
LINK : fatal error LNK1257: code generation failed

It's always worked fine for me on Vista, check for any other error messages such as missing header / library files or functions that could not be linked...

I figured it out, for some reason I had to go through and save every .cpp file once, don't no why but it did fix it.

Whenever you get that, you should tell it to do a "Rebuild all"
