Hi! I was wondering is it possible to get this tesla tower to fire, somebody made it and I would love to use it for my mod. I am guessing that is would fire and work just like the obby does. Thanks in advanced.

Here is the tread, I am talking about the tesla tower from the RA2 game.

It's called Tesla Coil and that one isn't that good. But if it's the only good one you can find I can't blame you.

It would be serverside if you made your own map then have others download it, but if you edit say hourglass and try putting the tesla on, it wont work.

I know, I am making a new map entirely I have it kinda set up like an RA2 map that's why I was wanting a tesla coil for some time now. HPhorq955 and/or jamiejrg could you make me a really good tesla coil that would work. I could extract the tesla coil sounds from RA2 and use them, but I need to know how to piece tge piecies all together. Anyway, I think that model there is really good, but I mean if you could make a better one then.....

Why? And how? If you dont have renegade installed, then how do you have the full games presets?

Are you retarded..?
He's had the full game installed.

So then why is he asking how does he install renegade because his Dad wont give him admin access in windows XP? He asked it in another thread.

Nvm I was wrong, he does have it installed, but not playable.
