Ok, i clicked Renegade and the core patch 2 pre - install checks began. At the end it said

"Core Patch Pre-Checks

RenGuard has detected corrupt files. In order to install Core patch 2, you need to download fixed copies and extract them to your renegade directory. Mix files (maps) belong to the data directory.

Click on those download links, unzip the files and put their contents in your Renegade/data directory to overwrite your files that do not match our expected profile, and when you are done restart RenGuard.

always
scripts"

When i click on the links for always and scripts it says that the page cannot be found or "HTTP 404"

Please help

You have to patch Renegade before installing RenGuard.

Just reinstalled Renegade after a few years of not playing and had this same problem. and my problem was that, Renegades autoupdate gave errors when installing the patch, so had to search the file and install manually.

Another problem that i've always had is that Renegade always freezes and compleatly crashes the computer when clicking on "Westwood Online" within the game the first time. Its because my firewall asks if it can connect to internet. To be able to give the permission i need to first run Renegade in windowed mode, to be able to see the message from the firewall.
