Okay, i am completely and utterly confused and annoyed.

I have been having continuous problems with RenGuard kicking me 2 mins into every single game i join because for some reason renguard has 'unexpectedly quit'. So i tried re-installing Renegade and RenGuard.

I installed it, installed the patch and installed RenGuard.

Now i join a server and 1 minute in :

<%aowbot> RenGuard has found unknown files on client friggi[CIV]!

<%aowbot> Host: [BR] friggi[CIV] is being kicked by RenGuard for: UNKNOWN FILES

I have installed no skins or maps or Cheats before anyone asks, i don't cheat.

Also, Renguard displays the error after i am kicked for 'UNKNOWN FILES':

[19:44] An error occurred within RenGuard. Please report this error: recv - 10054

Please help.

thefriggi

Start Renguard. (Don't start renegade, or if you've got it on auto-start, close it straight away)

Let Renguard have sometime to scan everything (give it a minute) then try Renegade.

Did you install Renegade in this order;

Install Renegade

Install Renegade patch

Install Renguard

Install Core patch

?

Haven't installed core patch yet, but apart from that, yes everything was in the correct order, I left RenGuard to scan everything for 10 minutes, still got kicked for UNKNOWN FILES!

Strange stuff. This error is a general error, closest thing to an explication we got for it is here.

First time I see the "unknown files" as well. Have you tried uninstalling renguard and renegade + vanilla reinstalling in a different directory?

10054 means your PC terminated the connection, it could be an erroneous error message after RG disconnected from the network after having found 'UNKNOWN' files.
