Well this is a two part post, I was wondering what you guys think of my new computer and how can I make it better. (Yes I know it is old, but it is great) [Got it for free]

<http://h10025.www1.hp.com/ewfrf/wc/document?dlc=en&lc=en&product=62758&am;cc=us&docname=bph06790>

I was also wondering what kind of computers do you guys use and/or have.

O_M_G you computer F_A_I_L_S

Pentium D 2.66Ghz, 2MB L2 Cache
2GB DDR 400
250GB SATA 7200RPM HDD
Sapphire Radeon X1550 256MB DDR2

You do know that computer is seriously outdated don't you?

I lucky have two computers, one that im using now which is my main machine. AMD Sempron 3100+ 2.1Ghz, 512mb DDR 333 (Was 1GB until a module blew) 320GB HDD and a XFX 7900GS 600.

And then I have my 'down stairs computer' AMD 4000+ 2.4Ghz, 2GB DDR 400, 250GB HDD and a XFX 7800 XXX Edition.

Im in the process of updating my sempron (God bless my poor sempron) to a AMD 6000+, 2GB DDR 800, 500GB but use the 7900GS card.

My 250 dollar PC is better than yours, mine came from HP, 1gb ddr2 ram, amd athlon 64 3800+, 160gig HDD, and nvidia 6150.....crappy specs, but beats the crap out of your PC for only 250 dollars...I souped my PC up into a gamer with more ram, and a better graphics card, the CPU will run almost all games at full speed and graphics will run all games at max settings, the only game that wont run smoothly is stranglehold, poor porting of the ps3 version.

[View Forum Message](#) <> [Reply to Message](#)

Hehe. I've got two. This one, which is a pile of old parts turned into something useable, so we won't talk about it (Ok - 2.0 ghz Single Core P4, 1.5 GB of SLOW RAM, An aging HDD with but 40GB in it, Radeon 9550. God it's slow)

The proper one

P4D 2.66 Ghz.
1GB RAM
4 cheap 80 GB hard disks (SATA) in a RAID 10 (or 0+1)
ATI X1650

Subject: Re: My computer

[View Forum Message](#) <> [Reply to Message](#)

Well my "new" computer is a real step up from my older one:

- *Pentium II 400 mhz processor
- *10 GB HDD
- *16 MB Voodoo 3 Graphics Card
- *Some added sound card
- *186 MB of RAM or some kind(DIMM I think)

Yeah I am gonna modify my "new" computer.

P.S I got that "new" computer for free.

[View Forum Message](#) <> [Reply to Message](#)

You won't be able to. Find a little more RAM, see if you can somehow attach a bigger HDD (Try a USB drive) and then turn it into a home server. If XP runs too slowly, try using a linux such as

Ubuntu.

[View Forum Message](#) <> [Reply to Message](#)

Your new pc isn't THAT bad, I'm still on 512Mb o' ram, And 2.0Ghz processor.. Isn't that slow.
But it could do with more ram, if you ask me.

What is wrong of making a Renegade server out of it? It would run just the same as clicking host

in the WOL menu.

It would be fucking slow, that's what. The readme for the server recommends about 800 Mhz + 200 Mhz per client after that. I would personally just recomend that you use something that's VERY FAST. I.e, not a PII

Question?

Why must people 'rice up' their computers like some 1993 Hon-Duh Civic?

And my computer is a Toshiba Qosmio laptop from 2005. Nothing special; 100 GB Hard Drive, 1 GB RAM... and a 128 MB Nvidia GeForceGo 6600.

Works for me.
