Try it.

On a random philosophical side note, no card can be "good". It has to be "good for a purpose", because if you only needed to draw 2D sketches in paint (lol!) then you wouldn't need a huge 3D capable card, you could use some tacky onboard solution and not notice the difference, therefore, the 3D card is "good for a purpose".

C&C 3 doesn't need a lot of power. This card, combined with a good cpu and decent amount of RAM, will surely get you to run C&C3 decently .

CPU: PASS

RAM: PASS

VIDEO CARD: FAIL
