I'm getting a message that my WOL is out of date which is crap because I have 1.37 which I manually pulled down after I had to do a reinstall.

I've searched XWIS, and here.

Running on Dell Intel 3gig single core with 512 ram, and an x300 amd card. NEVER had this issue in the five years I've owned this game.

Am I missing something?

If you have normal ren (not the first decade), this is usually because you installed an older C&C-game (red alert 2, for exemple) after renegade and you installed WOL for it.

It will then install an older version of WOL over the renegade version and you'll get an incompatibility message.

No, I haven't installed anything new. I was thiking the same concept with WOL being overwritten by old code or partially wiped so I did a complete reinstall. Still nothing

Any other ideas?

Can you give a screenshot of the message?

Renegade's 1.037 patch has nothing to do with WOL. If you have a non-TFD Renegade disk to put it in and install only the WOL components in the installer. If you only have a TFD disk, you can download the APB FDS and only install the WOL components.
