Okayas many of you may know my NR has had many problems in the past but thanx to your help
i have been able to fix them

But...i find recently that agrivatingly enough my NR can't find the Nightregulator.exe in the
Directory it's all installed in!

Somehoe for some reason the computer or another program Deletes the goddam .exe application

My computer is clean from Virus's->Cus MCaFee scans it like mad!lol

But can someone please offer and explanation? Cus i can't even just add the .exe file from the
installation setup cus it comes up with "Not enough storage space" or something-->I really want
this problem fixed mainly cus i nearly got my NR setup perfect 4 my server and if i reinstall i have
to reconfigure all the NR settings

Sounds like the shortcut was changed. Try looking in your NR directory for the exe itself and
running it manually. If that works, create a new shortcut for it.

Nono...i did not explain enough->
The NR.exe itself is what;s gone! I already looked in the NR directory...it aint there, i also checked
the Recylcing bin and it wasn't in there! SO WTF DID IT GO?>My computer has AI im telling ya

No never! I would have to be as bright and intelligent as a Lemming to do that-->

Something happened to it! Is there any way of fixing it other than Reinstalling it--?

download the setup, and then extract NightRegulator.exe from the CAB file into the NR dir.

My car has a cloaking device when it comes to intersections

You probably clicked and dragged it accidentally into another folder. Although you have probably already done what Nightma said.
P.S. I don't own a car

Maybe i did accidentally drag the NR.exe into another folder...
But it will be impossible to find it now<

I have had no NR for the past 4 weeks->Maybe regardless i should reinstall it and hope that it will keep all my settings

Or maybe you should read the help people are giving you

Nightma12 wrote on Sun, 04 November 2007 10:28download the setup, and then extract

---

NightRegulator.exe from the CAB file into the NR dir.

LOL, xD....
I have already said that i tried to do that->
AS i said...it's you that should really read more carefully

.....

What? So you put the .exe in ther... and what happened?

Im going to look like a fool now...
I had a BrainWave..."McaFee"

So i went into McaFee and found that it had quarunteened the NightRegulator.exe
(I restored it now)

So then, that's it...problem solved->
Srry 4 all the agro people

And umm do any of you know how i can make McaFee stop thinking NR is a malware!?

Everytime it scans it will Quarunteen NR->

lol NR malware....

What malware does it think NR is.... lol

I don't know, it just said Malware

WHy is it that protection programs such as McaFee and Norton think NR is a virus?

If the program is legit and downloaded from a good source like Microsoft Word etc
Why does it keep saying it's a virus or Malware?

Nightma12 have you checked on this problem? Because other server management programs like BR and CS do not have this problem...

Perhaps your anti-virus is shit?

I use NOD32, and i have NEVER had it flag NightReg as a virus.

I totally agree with you...McaFee is totall shit!
I hate it, always scanning on it's own lagging my comp 2 death and driving me mad when i
download something!

But it's the only one my big bro could get his hands on without having to pay £20 a month for!

NOD32 is £20ish first - time and £14 every year?
