---

My secret shame is that I love Pokemon.

In fact my biggest dream in life it to work for Gamefreaks and shape the world of Pokemon in ways I hold oh so very dear. I have been working with my brother for the last few months on PokemonCA (<http://www.PokemonCa.net>) but recently he dropped out and now I'm making my own engine in VB6 (He can code in C++) and soon the project will be exactly where we left off.

Thank god he listened to me when we started making all the data, I can easily parse everything we did into my new engine and I can build around it.

Well what I ask of you is to run this, hit the "click me" button and tell me if your FPS drops below 30. If it stays above 30 then your good to go, but below I would like to know your base system specs or even better a DXDiag.

(For DxDiag Start ~ Run ~ DXDiag ~ Save all Information button.)

And major note: This is a WIP and the collisions/sounds/water are all being worked on.

Download:  
<http://www.Oblivioninteractive.com/files/PokemonCA.zip>

Other:  
As always with anything made by me - VB6 Runtimes Required:  
<http://www.renhelp.net/downloads/VB6.0%20Runtimes.exe>

And please post is anything errors and what OS you have

Whao!

That's awesome!

I had a constant 32FPS, 33 when the lightning struck.

I have DX9.0c, 512MB o' ram, 2.0Ghz processor, ATi Radeon X550.

The save all info lagged my pc and wouldn't produce a log file.

meh.

30-32 fps without the rain, 26-28 fps and periodic drops to 23-24 fps with the rain. Also, it sometimes goes to 0/16 fps when I'm in the Options > Chat Text Size menu. Pokémon Red/Blue... man that takes me back... Also, in case the dxdiag doesn't have it, I have the nvidia 169.01 beta driver for the Crysis demo.

Thanks a lot for the info guys!

I put the rain/puddles on max so its good that the result have been solid so far.

@havoc9826 Yeah no worries, it doesn't count fps's correctly when your in the menu and 23-24 (33 should be max possible) is still pretty good. I guess I will have a low/med/high setting on particles

@Sn1per74\* Yeah being Pokemon brand name and all. I don't have a backup of that to put it anywhere but it was the old engine anyway.

Still needing to make a converter for the new map format from the old, its a biznatch to parse but completely needed. (25 maps or so)

And thanks everyone for the good comments on the engine thus far, really surprised that no one bashed the Pokemon

EDIT:

Some screenshots here:

<http://www.pokemonca.net/forums/viewtopic.php?t=13>

Maps will look exactly like that once they are converted...so its a good show of what it will look like.

Nothing wrong with Pokemon really, but I'm not interested in it anymore. Those were addicting though.

I'd test this, but I get an error as follows.

"Component 'MSWINSCK.OCX' or one of it's dependencies is not correctly registered: a file is missing or invalid"

I downloaded the file for the runtimes, but I get the feeling this is related to that still. I extracted it to my desktop, ran that, and it looked like it it was extracting or installing something (with a progress bar) and went away and did nothing I presumed it was done, but it did nothing more either way.

Thanks chuck, yeah that one file seems to popup ever few computers or so. Ill have to include it from now on.

If you would just put the file in the folder next to my exe or in Windows\System32 and then any/all programs can find it.

Once you pick a spot it should work fine but if not then it will have to be registered like so:

Example:

Start ~ Run ~ Cmd ~ Regsvr32 c:\windows\system32\MSWINSCK.OCX

Link to all files I use in PCA:

<http://www.oblivioninteractive.com/files/PCA%20files.zip>

You can put all of them safely in your system32 folder, they are not used unless a program calls for them.

That did it. The other three I overwrote what I had, so it was just the one missing.

I got results similar to havoc9826. A steady 32FPS normally, and it dropped to a steady 26-29FPS with rain. At times during rain (notably in the upper left where you start), it dipped to about 24. Lightning didn't seem to lower FPS at all. My PC isn't overly powerful though.

It's and MMORPG.....Sure you can figure the answer to that out

@Dave Anderson Seriously? With your stats it doesn't seem likely.

I'm tired, Y/N.

I said engine, not the game itself.

Well I could strip out all the PCA stuff...sure but I hadn't planned to release the source code just to not help the cheaters. I've been writing the code interchangeably so making a different game on this engine would be do-able.

I'm using the usual server side anti-cheating techniques of course but why make it hard on myself?

As of right now I would let people use the engine. No promises in the future though

Ahh, I assumed it would be open source to avoid a law suit from Nintendo.

But.. If it's going to be free.. then I don't think you'd get one anyway.

yeah, Server side is the way to go though!

I'd take that back if I were you. Do you remember a little site called Demonoid?

Of course you do.

I get this error:

PCA Client:

Run-time error '429':

ActiveX component can't create object.

I have installed the VB runtimes.

Did you try the components I added to fix Chuck's problem? Sounds like it cant activate DirectX 7, which is odd because its as old the world itself.

The Dx7 file is in those dll's so that should patch it up.

@CaveMan since my app uses DX (for some things) its idles when not in focus, so the fps counter stop counting and it well idles. No worries and again thanks everyone for the computer stats.

Hah! You people who spend \$\$\$ on your systems got the same results as this thing!

P4 Single core 2GHz.

1.5 GB RAM, 227 (I think) Mhz  
ATA 100 HDD (In case that matters)  
Radeon 9550 w/ 512MB RAM.

32/31 FPS come rain or shine.

---

33 FPS for a high.  
30 for a low.

CarrierII wrote on Tue, 13 November 2007 12:47Hah! You people who spend \$\$\$ on your systems got the same results as this thing!

Well I'm running a hefty rig and wanted to make sure this would be compatible with lower end systems. I'm not a professional programmer or game designer so I wasn't sure if my beast was making up for laggy code

Sir Kane wrote on Tue, 13 November 2007 16:08But why VB?

I have yet to learn C++, my brother started with vb6 as well then went on to C++ and he assures me that its pretty much the same. To me though it seems like to do anything graphical at all in C++ it takes a hell of a lot more work get get the same results.

I feel confident enough in my VB6 skills to take on a project of this magnitude. Two week in and I have a pretty decent server and all the work above to show for it.

And sure VB can be a pain with the runtimes and some computers have the occasional component or two missing but after awhile you'll get everything you need included with the release.

Why not VB? It meets his requirements for what he wants to do it seems like.

I have to learn C++ myself. Just can't bring myself to find the time though.

Yup me too.

I find it harder and harder to want to learn C++ with Vb around. If I need a program all I have to do is whip it out and be done with it. No fiddling, trying to find something that works....I ruined myself.

Your walking demo was removed "This video has been removed due to terms of use violation." lol

Constant 32 FPS, very good. I noticed, that if it's raining, when I go upwards, the rain goes faster, and when I go down, the rain goes slower. o.O

I think thats an optical illusion because the rains not dynamic across the map yet. Ill see about writing some code to increase the speed of rain based on character direction.

Also I plan on making the rain tilt with the character like in Renegade. (Look straight up and walk

around to see what i'm talking about.)

So far the audio is dynamic for the strikes, the sound will play out of Left - Center - Right based on where the "supposed" strike was.

EDIT: Nope your right, the rain physically slows down when the map is shifting. Good eye on that

VB is slow. And that winsock activex control doesn't help it, either.

Doesn't sound like you have used VB6 that much. Its just as fast as anything I've seen done in C++ and Winsock is the same stuff you guys use in C++.

It certainly isn't anywhere as fast as C/C++ code performing the same thing. And that AX socket stuff isn't the same as what you would use in C/C++, either.

Then what standard protocol do you guys use then? My brothers version used sockets as well but I'm not sure what was the actual code or component used. As of right now this look like it can handle 1000 clients per win32 server. I doubt I would ever have any more than that anyway.

Nightma12 wrote on Tue, 13 November 2007 18:05Run time error 429

ActiveX componanet cant create object

Win Vista Home Premium

I'm on Vista Ultimate x64 and I had to manually register the components. I will be making a auto program that will do it when needed but until then if you want to try the engine you would have to do it manually.

I have to learn C++ myself. Just can't bring myself to find the time though.

My main objection to VB aside from personal language prefernces is that you're locked into a Microsoft-based language.

If you're prepared to limit yourself to a single OS then it's fine, but I personally get annoyed unless I use something that is OS independent.

Jecht wrote on Wed, 14 November 2007 12:48 True I suppose. Coding it in Java or something like it would be a pain though

Most of my development work has been in Java, which has its strengths and weaknesses, but yes, for games you don't want Java.

C++ would be my recommendation, but having worked with it for a while and cursing it even longer I can understand someone going with what I consider to be a more limited language to gain productivity.

Oblivion165 wrote on Mon, 12 November 2007 21:25 My secret shame is that I love Pokemon.

---

In fact my biggest dream in life it to work for Gamefreaks and shape the world of Pokemon in ways I hold oh so very dear. I have been working with my brother for the last few months on PokemonCA (<http://www.PokemonCa.net>) but recently he dropped out and now I'm making my own engine in VB6 (He can code in C++) and soon the project will be exactly where we left off.

Thank god he listened to me when we started making all the data, I can easily parse everything we did into my new engine and I can build around it.

Well what I ask of you is to run this, hit the "click me" button and tell me if your FPS drops below 30. If it stays above 30 then your good to go, but below I would like to know your base system specs or even better a DXDiag.

(For DxDiag Start ~ Run ~ DXDiag ~ Save all Information button.)

And major note: This is a WIP and the collisions/sounds/water are all being worked on.

Download:

<http://www.Oblivioninteractive.com/files/PokemonCA.zip>

Other:

As always with anything made by me - VB6 Runtimes Required:

<http://www.renhelp.net/downloads/VB6.0%20Runtimes.exe>

And please post is anything errors and what OS you have

My secret I dont tell my friends...I LOVE POKEMON TOO, not the new cartoon, that show sucks sooo bad, every season I see if the enw series is good enough like the original, none so far.

I HATE 4Kids so much right now, they got those new voice actors and it just ruined the whole show. All the original voice actors wanted was a standard raise....but NOOO they just hired new voice actors to ruin the entire series.

me = sad

The new episodes aren't even watchable now. (Diamond and Pearl should be coming to America soon, if it isn't already)
