@ goztow, I dont really support cp2, Im a cp1 person. What is better in cp2 than cp1? If a lot of people use it all be sure to add it.

@ renalpha, wheres the download? I just see a readme.. lol but thanks

Heres VB runtime files if you really need them? Download

@ anyone else, if it says your missing some other file thats not in there ^^ just as me and ill be sure to hook you up with them.

It wouldn't be a complete tool manager without it. I don't know many people that don't have CP2, either.

I was just brought back up to speed on Core Patch 2. It seems that Core Patch 2 = Core Patch 1 Version 2.3 with some extra maps. For those who are not aware, Core Patch 1 is currently on version 3.4.4. I am confused on how you think Core Patch 2 can build on Core Patch 1...

Subject: Re: Renegade Tool Manager

[View Forum Message](#) <> [Reply to Message](#)

some servers require cp2 to use some of the stuff in them

Subject: Re: Renegade Tool Manager

Posted by [PsuFan](#) on Sat, 24 Nov 2007 04:44:33 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well since cp1 is version 3.4.4. I think that Core Patch 1 has more scripts & features than cp2, So i think servers requiring it would be satisfied by core patch 1.. I could be wrong however.

Subject: Re: Renegade Tool Manager

Posted by [Lone0001](#) on Sat, 24 Nov 2007 04:48:16 GMT

[View Forum Message](#) <> [Reply to Message](#)

You would be, I am a mod on a server where CP2 is required to use some of the features of it and

I have tested with CP1(DOES NOT WORK)

[View Forum Message](#) <> [Reply to Message](#)

Wouldn't simple logic tell you that Core Patch 1 was the predecessor of Core Patch 2?

Subject: Re: Renegade Tool Manager

[View Forum Message](#) <> [Reply to Message](#)

"CP2readme"General Features:

- The faster map loading enjoyed with Core Patch 1 has been made even faster in this patch.
- Version 2.2.1 of the custom scripts.dll by "jonwil"
- The font change inadvertently introduced, and the custom loadscreen in CP1 has been revoked, restoring the Renegade defaults.
- Servers running CP2 will no longer allow players to get on top of the refinery on non-flying maps.
- Fixed "error 17" and other more rare errors in the installer.
- Added keyboard configuration for SSAOW keys, also includes keycfg.exe to change these assignments.
- Harvester harvesting arms now animate (if the server is running the right version of bhs.dll)
- A fix for the invisible harvester bug (where if you have an airstrip & power plant is destroyed, the harvester will respawn invisible).
- Infantry death sounds and powerup collection sounds will now play (if the server runs the right version of bhs.dll)
- New crash handling code that makes the "xxx.exe has just crashed" dialogs from windows go away as well as creating a new crashlog file called crashdump.txt (instead of the old _except.txt which is gone now)

Map changes/fixes:

- Blocked ability for players to get on top of refinery on non-flying maps
- C&C_Canyon.mix: Blocked ability for players to get on top of the Weapons Factory
- C&C_Complex.mix: Prevent GDI Base-to-Base exploit to hit refinery
- C&C_FieldTS.mix: Prevent Nod buggies from entering tunnels

- C&C_FieldTS.mix: Fixed problem near obelisk where vehicles can get stuck
- C&C_Islands.mix: Added blockers to prevent more Base-to-Base exploits
- C&C_Snow.mix: Fixed a Base-to-Base exploit
- C&C_Under.mix: Fixed a bad spawn point in the Hand of Nod

New console commands for the Free Dedicated Server:

-
- SNDT <wav file> <team> - Plays a WAV file for the specified team. Host only.
 - SND3DA <player> <wav file> - Plays a 3D WAV file for all players. The player is used to identify where to play the 3d sound. Host only.
 - SND3DP <player> <wav file> - Plays a 3D WAV file for a specific player. Host only.
 - SND3DT <player> <team> <wav file> - Plays a 3D sound for a given team at the location of <player>. Host only.
 - TPAGE <team> <message> - Sends a page to a specific team. Host only.
 - MLIMIT <new limit> - Sets the mine limit. Limit of 127. Renegade host only.
 - MUSICA <mp3 file> - Plays a MP3 file for all players. Host only.
 - MUSICP <player> <mp3 file> - Plays a MP3 file for a specific player. Host only.
 - NOMUSICA - Stops the background music for all players. Host only.
 - NOMUSICP <player> - Stops the background music for a specific player. Host only.
 - SONG - Prints the name of the last song loaded by the MUSIC command or the Set_Background_Music script command. Host only.
 - ICON <player> <w3d file> - Shows an emoticon over the head of the passed in player that is visible to their team. Host only.
 - WIN <team> - Kills the buildings of the other team to end the game. Host only.
 - TMSG <player> <message> - Sends a message to a team as though it was coming from <player>.

(For all commands requiring a team, use 0 for Nod and 1 for GDI)

New client console commands:

-
- SCREENSHOT changes the format of screenshots output by renegade. 0 = PNG, 1 = TGA. This setting gets saved into the registry. The default (if you have never used the SCREENSHOT command before) is PNG. Setting is saved in your registry as ScreenshotFormat under the HKEY_LOCAL_MACHINE\SOFTWARE\Westwood\Renegade key, values are the same as for the console command (0 = PNG, 1 = TGA)
 - SCREENFMT prints the current screenshot format
 - LOG changes whether the client chat log is output or not, 0 = disabled, 1 = enabled. This setting gets saved into the registry. The default (if you have never used the LOG command before) is enabled. Setting is saved as ClientChatLog under the HKEY_LOCAL_MACHINE\SOFTWARE\Westwood\Renegade key, values are the same as for the console command (0 = disabled, 1 = enabled)
- New client side chatlog that will log the following:
- * all uses of MESASGE on the host
 - * all uses of PPAGE on the host for this player
 - * all uses of TPAGE on the host for this team

- * all uses of TMSG on the host for this team
 - * all f2 chat messages
 - * all f3 chat messages for this team
 - * There will be an indication if its for everyone, team or private (note that because of how it works, a TPAGE command will be marked "private" and not "team", messages sent by the TMSG command will show up as team messages)
 - * This also records messages like "host: xxx changed teams" and "host: xxx committed suicide"
- LOGP prints the status of whether the client chat log is being output or not.

New Maps:

C&C_BunkersTS by Aircraftkiller
C&C_Last_Stand by Titan1x77
C&C_Terrace by Titan1x77
C&C_Tropics by Aircraftkiller

keycfg.exe How-To:

keycfg.exe is the GUI based editor for keys.cfg. The CP2 installer will put this application in your Renegade directory.

When you start the application, your existing key configuration will be loaded and displayed in the window. To change the key that triggers the item, click on the item your wish to change and press the new requested key.

Click "Save & Quit" to save your changes and quit the application. If you change your mind and wish to keep your existing keys, close the window or click "Quit" to leave without saving.

[View Forum Message](#) <> [Reply to Message](#)

He is thinking scripts.dll versions. You can use any scripts version with either core patch, but CP2 contains some other fixes for maps and such. There are no CP versions. CP1 is CP1 which came with some early scripts.dll version (dunno which). CP2 came with a later scripts.dll version namely 2.3.

[View Forum Message](#) <> [Reply to Message](#)

What about console commands. 3.4.4 has probably twice as many console commands.

Quote:

ADMIN_MESSAGE <message> - sends an admin message to all clients. Host only. (amsg)
ALLOW [<Nickname>|<Id>] - Remove user channel ban from this server (WOL mode only).
BAN [<Nickname>|<Id>] - Permanently ban a user from this server (GameSpy & WOL mode only).
CLIENT_PHYSICS_OPTIMIZATION [0|1] - Update only visible physic objects on client. (cpo)
CMSG <red>,<green>,<blue> <message> - Displays a colored message in the info box of all players. Host only.
CMSGP <player> <red>,<green>,<blue> <message> - Displays a colored message in the info box of a player. Host only.
CMSGT <team> <red>,<green>,<blue> <message> - Displays a colored message in the info box of a team. Host only.
DISARM <player> - Disarms all C4 of a player. Host only.
DISARMB <player> - Disarms all beacons of a player. Host only.
DISARMP <player> - Disarms all proximity C4 of a player. Host only.
DONATE <from player> <to player> <amount> - Move cash from one player to another on the same team.
EDIT_VEHICLE - Edit the parameters of the currently driven vehicle.
EJECT <player> - Ejects that player from whatever vehicle they are in, if any
EXIT - Exits renegade. Renegade Client only.
EXTRAS <key>
FPS - toggle FPS display. (fps)
GAME_INFO - Print info about a game in progress to console box
GAMEOVER - end current game (server only).
GETBW <player> - retrieves the current bandwidth for <player> (as set by sbbo)
HUD <number> - enables or disables the HUD, 0 = disabled, 1 = enabled
ICON <player> <w3d file> - Shows an emoticon over the head of the passed in player that is visible to their team. Host only.
ICON2 <player> <w3d file> - Shows an emoticon over the head of the passed in player that is visible to their enemies. Host only.
ID <string> - Prints the name and ID of all players matching <string>. No string means all players.
KICK [<Nickname>|<Id>] - Kick a user from the game.
LOG <number> - enables or disables the client chatlog, 0 = disabled, 1 = enabled
LOGP - prints the status of the client chatlog
MAP - Print the name of the current map. Host only.
MAPCH <player> <map> - Check if a given client has a given map. Host Only.
MAPNUM - Print the index within the map list of the current map. Host only.
MAXPLIMITD - Displays the original player limit (also the maximum player limit)
MESSAGE <message> - sends a chat message to all clients. Host only. (msg)
MINED <team> - Print the current mine count for <team>. Host only.
0 = Nod
1 = GDI
MLIMIT <new limit> - Sets the mine limit. Limit of 127. Renegade host only.
MLIMITD - Print the current mine limit. Host only.
MLIST <position> - Print the name of the map in the given position in the map list. Numbers are from 0 to 99. Host only.
MLISTC <position> <map> - Change the map at <position> in the map list. Numbers are from 0 to 99. Host only.

MOD - Print the name of the current mod. Host only.
 MUSICA <mp3 file> - Plays a MP3 file for all players. Host only.
 MUSICP <player> <mp3 file> - Plays a MP3 file for a specific player. Host only.
 NET_UPDATE_RATE - set the max. net update think rate (times per second). (nur)
 NOMUSICA - Stops the background music for all players. Host only.
 NOMUSICP <player> - Stops the background music for a specific player. Host only.
 PAMSG <player> <message> - Sends an admin message to a specific player. Host only.
 PINFO - print information about the players in the game
 PLAYER_INFO - Print info about players in the game to the console box
 PLIMIT <new limit> - Changes the player limit
 PLIMITD - Displays the current player limit
 PPAGE <player> <message> - Sends a page to a specific player. Host only.
 QUIT - End game and quit to desktop (dedicated server only).

 QUIT_SLAVE slavename - Shutdown a slave server (dedicated master server only).
 RADAR - Get the radar mode for the server. Host only.
 RESTART - Quit to desktop and restart process (dedicated server only).
 RLMON <1.2.3.4:1234> - Sets the current renlog mointor. Dedicated Servers only
 RLMONOFF - Clears the current renlog mointor. Dedicated Servers only
 SCREEN_UV_BIAS - toggles the half pixel bias in screen text.
 SCREENFMT - prints the current screenshot format
 SCREENSHOT <number> - changes the format of screenshots. Default is png, 0 = png, 1 = tga.
 This is saved in the registry
 SET_BW_BUDGET_OUT <bps> - set total bps budget out. (sbbo)
 SETBW <player> <bandwidth> - sets the current bandwidth for <player> (as set by sbbo)
 SND3DA <player> <wav file> - Plays a 3D WAV file for all players. The player is used to identify
 where to play the 3d sound. Host only.
 SND3DP <player> <wav file> - Plays a 3D WAV file for a specific player. Host only.
 SND3DT <player> <team> <wav file> - Plays a 3D sound for a given team at the location of
 <player>. Host only.
 0 = Nod
 1 = GDI
 SNDA <wav file> - Plays a WAV file for all players. Host only.
 SNDP <player> <wav file> - Plays a WAV file for a specific player. Host only.
 SNDT <team> <wav file> - Plays a WAV file for a specific team. Host only.
 SONG - Prints the name of the last song loaded by the MUSIC command or the
 Set_Background_Music script command. Host only.
 SVERSION - Get the version of bhs.dll installed on this machine.
 TEAM <player> <team> - Changes a players team. Host only.
 0 = Nod
 1 = GDI
 TEAM2 <player> <team> - Changes a players team without taking cash/score Host only.
 0 = Nod
 1 = GDI
 TIME <new time> - Changes the time remaining
 TIMED - Displays the time remaining
 TIMEL <new limit> - Changes the time limit
 TIMELD - Displays the time limit

TMSG <player> <message> - Sends a message to a team as though it was coming from <player>.
TOGGLE_SORTING - toggles WW3D sorting.
TPAGE <team> <message> - Sends a page to a specific team. Host only.
0 = Nod
1 = GDI
VERSION <player> - Get the version of bhs.dll installed on a client. Host Only.
VIEW <w3d filename> <animation name> - displays a w3d file in a dialog. Use to examine models for test purposes.
VLIMIT <limit> - Changes the current vehicle limit. Host only.
VLIMITD - Displays the current vehicle limit. Host only.
WIN <team> - Kills the buildings of the other team to end the game. Host only.
0 = Nod
1 = GDI

How do you live without all of these console commands? NR wont even function on some commands because the proper console commands are not there...

But Im done fighting with you guys, give me a link to download (preferably files & not installer, if its installer, i need to know what it does in installation process).

Those are the console commands in CP1 v3.4.4.

Subject: Re: Renegade Tool Manager
Posted by [Ghostshaw](#) on Sat, 24 Nov 2007 15:22:53 GMT
[View Forum Message](#) <> [Reply to Message](#)

THERE IS NO CP 1 3.4.4 ITS SCRIPTS.DLL 3.4.4.

You can just install scripts 3.4.4 with CP2 all the same (I have it). And on the server you will proly have SSGM anyway which is absed on some other scripts version.

[View Forum Message](#) <> [Reply to Message](#)

Quote:Server Side Game Manager v2.0.2 with Scripts.dll v3.4.1 loaded

Hmm I wonder if SSGM uses CP1 or 2. I doubt you can have CP1 & 2 running at the same time, since the portal into both is scripts.dll. And CP1 wont run bhs.dll of a different version if you run newer CP1's.

Quote:But Im done fighting with you guys, give me a link to download (preferably files & not installer, if its installer, i need to know what it does in installation process).

Subject: Re: Renegade Tool Manager
Posted by [Caveman](#) on Sat, 24 Nov 2007 15:39:29 GMT
[View Forum Message](#) <> [Reply to Message](#)

SSGM doesn't use any CP because its based on SCRIPTS 3.X. CP1/2 is more then just newer scripts/bhs.dll if you download CP1 from here you will get CP1 which includes scripts 1.9 IIRC. If you download CP2 you get CP1 with CP2 fixes like the harv bug and scripts 2.3. You can then install scripts 3.X and keep the changes from the always.dat and .mix's from the CP2 download while having the new console commands provided with scripts 3.x

I hope that clears things up for you.

Edit:

I have CP1 installed and have installed the newer scripts. I didn't personally see the point of downloading CP2. It had nothing I wanted at the time of its release.

[View Forum Message](#) <> [Reply to Message](#)

Thanks.

I guess I still have to include it in my program so they will use it ^^

Where can I get it >.<

Btw is CP2 updated anytime recently like CP1 has?

Subject: Re: Renegade Tool Manager
Posted by [Ghostshaw](#) on Sat, 24 Nov 2007 15:49:07 GMT
[View Forum Message](#) <> [Reply to Message](#)

CP1 was never upgraded... just scripts was and you can install that with either CP1 or CP2.

[View Forum Message](#) <> [Reply to Message](#)

No scrips.dll doesn't have anything to do with any CP except that both CP's include one version by default in CP1 that is scripts 1.9 and in CP2 it is 2.3.The primary thing for the CP's are the new and fixed maps.

Dude read what you just wrote. It cannot find the old file but its found a file with the same name however its contents don't match. Which means you have either a newer or older version of always2.dat. In the link I gave you there *should* be links to the files that you might need. If you install CP1 and then CP2 straight after it'll work like it should.

It said download this if you already have CP1, which I did and now it says the file isnt the same, I dont know its just confusing, and to know pretty much about computers, and cant get this damn thing to work, Didnt try to much & this website got locked up so I didnt get back to download the file seperate.

But question is, how am i supposed to put this in the tool manager when theres so many exceptions, has cp1, doesnt have it, this files not right, etc. Is there a one size fits all?

If you install Renegade, patch it, install CP1 and then install CP2 it will work flawlessly. Its only when you start to download maps and install other addons and whatnot it starts to bitch about missing/wrong files.

It might be best if you removed CP1 from your manager since CP2 has CP1 in it and use the patchall.zip download. You could also include Server side CP2 again this is the download for cp2 without cp1 installed.

[View Forum Message](#) <> [Reply to Message](#)

It would be wise if you did as I suggested. Remove CP1 from your manager and replace it with CP2. That way you get them both in one download and it can't bitch about wrong files.

Well then I guess hes coveman is right with the cp1, I dont know what the fk you guys are talking about, but what I see as CP1, is just nameing scripts.dll > scripts2.dll, adding bhs.dll, shaders.dll, d3d8.dll... No installer, no always.dat mod. You guys are very confusing

Well I guess you guys are think that cp1 is something I dont think it is. I call scripts.dll cp1... Thats what I always thought it was, and cp2 was made & installed by renguard. So w-e.

CP1 is Core Patch 1. It adds new maps like snow.mix and adds fixes to the client, like wall jumping with a buggy on Mesa. It also contains the latest stable release of scripts.dll/bhs at the time of its release. If you install Ren and patch it then just install Scripts 3.4.4 you will get new console commands, shaders but you wont get the fixes for maps and other custom stuff like the animations above someones head when they use a radio command. Also I think one of the CP's contains the keycfg for the custom keys but im not too sure.

So the installer didnt work because we werent calling cp1 the same thing

scripts.dll != cp1

Another question, why does the installer care if its a different file, you patch it anyway.....

That link that you posted to cp2, if i just download all the files attached at the bottom, and place the in the correct locations, would that install cp2, for everyone, scripts.dll users, cp1 users?

That link that you posted to cp2, if i just download all the files attached at the bottom, and place the in the correct locations, would that install cp2, for everyone, scripts.dll users, cp1 users?

Because it's actually PATCHING the file, if the contents don't match then the patcher would potentially destroy the file.

Well you wouldn't need all them files if you've just installed Renegade. If someone downloads your tool, installs ren and then patches it. Uses your tool to install CP2. The patchall.zip that I linked you to earlier will install CP2 without any errors whatsoever.

This is why I said remove CP1 and add CP2.

Subject: Re: Renegade Tool Manager

I DONT have cp1. Your saying cp1 != scripts.dll & im saying scripts.dll = cp1. Thats what the installer installs, you call it scripts.dll. So it doesnt install cp1.

and I dont prefer to run the patcher, because if it gets an error, the installer wont know about it.

PSUFAN, you could easily host the contents of patcher and patch all, get your program to download both to the renegade folder and then have your program execute the patcher.exe.

I think that would be the last thing to do anyway .

Subject: Re: Renegade Tool Manager

@ Yrr/Eternal: Post/PM me a link to files & install instructions, I have no problem adding any mods if they are easy to install etc. (Even if there not, as long as you are helpful I will surely add anything)

@ Goztow: Dont I need that 56 mb file also? If I were to download those two files and run them in my renegade directory, it would say I was missing that file, wouldnt it?

@ Coveman/Caveman: I told you before, I thought for a very long time that cp1 was scripts.dll.. Which is why I thought I had cp1. I dont know how this happened, but Ive been in renegade for many years, Ive had scripts.dll since version 1.9, And thought it was called cp1 ever since.

Ok so if you want to install CP2. Download the patchall.zip and run that. It will find yours always2.dat and go oh look its the non patched version so i'll patch it for him. You downloaded the CP2 that goes this file is meant to be patched wtf I can't fix this. Which is why it gave you the error.

But w-e Ill add it and see what complaints I get.

Not really: the patcher.exe runs in a DOS window and will tell the user if there are errors so he can solve them . And yes: patchall.zip is the 56 MB file, I think. patcher is the installer itself, patchall is the stuff it needs to install .

Im afraid I dont understand what your saying

If you want me to build a shell command into the tool manager, you could use that for your updater. You could shell the tool manager with /RRupdate or something? If you like that is. If not I understand.

Yeah, just catching up on the thread, and I have only one suggestion: learn what the hell you're working with before actually working with it.

@ Ethenal, Thanks, If you think of anything that should be added just say so..

@ cmatt42, Well I dont really know who you are, or if you know what your talking about but I think the Tool Manager works just fine. Yes there might have been some confusion about the Core Patch 1 and Scripts.dll. But thats behind us now, its been out for about a week, no one has reported any bugs. Testers have tested mostly everything and verified it worked fine for them on their computers. I am very confused as to what you think I dont know, because the program is already out and functions fine. The program is already functioning with BRenBot install & all NR & BR Plugins, Core Patch 2 is almost complete also. If you would like to clarify on what I need to learn, I will be happy to tell you what ever you want.

Well, unless you want to add CloudyServ (CS), you're set.

<http://www.cloudyonestudios.com/>

It's an mIRC bot, so it should be easy enough to add.

Quote:Downloads Main Categories

There are 0 Downloads and 0 Categories in our database

E: I found on a website that looks like a text file!

Anyway, Looks very easy to install, I think the .exe installer is just a file extractor.

Yeah I was just wondering if it worked, New versions coming out soon and it looks great, I got resume downloads in the middle of the file to work.

Also worked on offline mode so server owners can install multiple servers offline. (Or any other component you downloaded before)
