Well I seem to be following the trend everyone else is having but cant answer my problem, it all started almost 4 - 6 months ago. One day it wouldnt connect through wol for renegade straight through. So I used my GSA and still I cant connect through renegade to get on wol. Its all fine and dandy but now I tried to play yuris revenge and it says could not connect to westwood online and to check my internet connection. I tried reinstall shared internet components nothing. I have no firewall and no port is blocked for it that I know of. I could use GSA on YR but than I cant play with my buddies. I tried that xwisx tool but it wont open for me when I download it. Please help.

I used the XCC WOL IRC Server client tool and the 2 ips were different so I selected Set {XWIS} and it worked lol.
