Has been canceled, yesterday my hard drive quit and won't start back up, all I have is my week old back up on this tablet, so I am fairly sure I won't be able to get it done with finals coming up and all. This Wednesday when I go home I will use my other computer to see if I can pull any of the files off.

Must you always ask me my opinion, say its stupid and argue with me about it for hours then later completely agree with it like nothing was said?

(He was going to buy a SeaGate everyone)

That sucks would you mind sharing what was going to be changed with it?

Subject: Re: Christmas release of scripts!
Posted by Jerad2142 on Sun, 16 Dec 2007 17:47:06 GMT

I just added a few for swimming, boats, parachutes, and other stuff.

Subject: Re: Christmas release of scripts!

swimming and boats cool

Subject: Re: Christmas release of scripts!
Posted by cnc95fan on Sun, 16 Dec 2007 17:58:21 GMT

Swimming? Cool, shame you lost the files

Subject: Re: Christmas release of scripts!
Posted by Jerad2142 on Sun, 16 Dec 2007 18:08:04 GMT

Oh I didn't lose the files, but they are a week old, so I won't be able to release them by Christmas unless I can recover them off my hard drive.

Subject: Re: Christmas release of scripts!
Posted by mrÃ£Ã§Ä·z on Sun, 16 Dec 2007 18:33:31 GMT

WTF swimming, boats etc? DUDE I LOVE YOU !!!

Subject: Re: Christmas release of scripts!
Posted by Jerad2142 on Mon, 17 Dec 2007 15:51:11 GMT

Well I guess I might be able to make it, I just don't want to restart making the scripts until I know I won't be able to recover them off my hard drive, so until then I will start making the readme's.

Lol, it was a seagate, but things don't look good, I think I might have to redo the scripts. And my Renetbusters mod is probably lost for good.

Gah. My WD gave out after six years in a blaze (literally) of glory. It's rather annoying. Sorry to hear this. Hopefully it will fix itself.

Lol I have to HDD's the main one, a maxtor (6 GB) has been with me for about 12 years.......I can hear it turn off while the computer is running and everythings still forks fine.....Then it makes some weird spas noise and turns off and then back on all over for like 20 min, then it goes back to normal for 4 hours, then it repeats the whole process......I have an 80 GIG one that I am gonna put Xp on, a whole lot newer....

CarrierII wrote on Thu, 20 December 2007 13:49Gah. My WD gave out after six years in a blaze (literally) of glory.

You mean it caught on fire!?

No, he meant someone stole it, hence the "literally".

Anyways, that really sucks, but atleast you have a week old backup. Swimming sounded pretty awesome.

How was it gonna work ingame, anyways?

It detects which way you were moving and make you play according animations. And it let you move up and down freely, but it disables you weapons.

put a boot disk in ur floppy or your cd drive turn that mother on, get the command prompt. and COPY C:\myscripts to a disk !!!!

and if it is totaly dead just find another computer and put ur 'broken' as a slave. then just use recovery apps to get the files .. i do it all the time my basement looks like bill gates closet.

Yes, I just need to rebuild the swimming script now and it will be ready for release, there will be a persistent flow of updates after that.

I did try, but the hard drive suffered from physical damage, luckily I only lost one mod. The other two still live.

This weekend I froze my hard drive for 24 hours, for some reason this action allowed me to get back onto the hard drive and recover ALL of my scripts. I have to update them a little here and there but then it is all systems go.

Freezing contracts the reading head of the hard disk by a little, which allows it to stop touching the disks (which is probably causing the problem) and thus let it run for some time before going back

to the screwed up condition.

Ahah, I must relate this to the IT people at my mum's work, and save me about 10 hours of typing, although 10 hours @ £6.40, hmm....
