idk how to ask this right but how can i put a picture as a mask behind another picture.....if that makes any sence

just like this

see how its a picture inside the bell but where the cell cuts out the pic ends and continue on the rest of the pic

still understand what i mean?

How can i do that?

Well that was helpful...

I think you should make 1 layer with the picture you want, then make a second layer on top of the first one and then make a outline of the shape you want to cover up, then use the fill bucket and fill it in black.

First you need the shape you want a picture to conform to on one layer, and the picture you want to be shaped on another layer directly above that layer. Right click on the picture layer and select "Create Clipping Mask."

---

That should be it.

its called clipping mask.

have 2 layers. one with the background image, the other with what you want to remain (if that makes any sence).

right click on the background image's layer in the layer window and select 'create clipping mask'

Magnetic laso tool the shape, then fill the outside black. Otherwise, erase it all and save it as a .gif, it will just be the shape with an outline and the background will be clear, so all forum background color will be shown.

You could just make 2 layers, then on the top layer use the magnetic lasso and outline the shape, then click delete and it should come through.

wat if its ot just a plain shape but has 2 parts the outside outline and inside outline make sence?  
like not just a squire but lets say....the bell above i posted has part inside and out to cut  
around....

Dammit, whats the pic you want in the background, and the shape you want, and I will freaking do  
it.

never i got it! i figured it out it whould have been easier if i was smart enough to say it for you guys  
could understand more  
but thank you guys! i would have never figured it out myself
