Subject: CP2 patcher.exe bug

Hello, I need to speak with someone that knows CP2. When I shell (execute) the patcher.exe from my program, It says it cannot find the patch file. When the file is there and works fine. Executing the file manually works fine and it finds the patcher file.

Message me back on here, or contact me on AIM/MSN ASAP. This stupid mod is holding up my program release.

Fixed it, The patcher uses some current directory that thinks the directory is the directory of MY program, not the loaded directory of the patcher.
