I'm not sure if this has been brought up before, but I think this would be pretty cool. If the tiberium in Renegade could be modeled and skinned to look like the tiberium in CnC3. Here is a picture.

Toggle Spoiler

Anybody think that they could make this happen? Because I'm a pretty shit modeler.

It's Possible but Dont Know How to Model Yet soon hopefully can be a good modeler

somet like this. this is a flat version of it

You would need to either have it as a flat texture replacement or only custom maps could have it.

What about remodeling the tib spikes into a group of tib spikes from cnc3? and then skinning the flat part that isn't covered by tib spikes could just be something relevant.

It would be hard to get it properly like the cnc3 tiberium, that is, if you want it to disappear with the harvester, you would need a script for that, otherwise.. do it like you normaly would make a Tiberium field... exept just put tiberium crystals there.

You could probably replace the models of some of the tiberium crystals in Renegade. Most of them have collision disabled, so it wouldn't make a big difference.

The disappearing would be unnecessary, I just wan't the model. How it gets done isn't a problem, as long as it works.

It's all just textures in the original maps. Only custom maps use models, usually the ones Aircraftkiller made.

why cant this model be used like any other model you can extract into your data folder?

i though almost every map have these models,

canyon,
field,
glacier <- ack sry ye i know

these are them as far i can tell but ye,
there are hardly maps with these tiberium crystals.
