Hi

Recently i have seen people throwing multiple c4 mainly timed at a super fast speed??? I asked them if it was a bug and they told me no.

I seen people using this for what was called flaming sbh and i think apc. And as far as i know this was not a intended function for the game. So if its not a bug can someone plzz tell me how to do it???

At what speed? If it is like it sounds then it is not a bug it is a cheat if you see anyone do that they are a cheater and you should report them to the server owner, the forums of the server, or a mod if any are on.

What server is this?

Well i only play AOW so it was N00bstories or what is it jelly?? I don't remember every instance but one of the two.

But last time was in n00bstories when they were sending flaming sbh in the tunnels. It would run at you and like a constant stream of time c4 would go off one after another.

Killing anyone close to them...

Well the rapid throw of c4 if it was fast and without refilling would be cheating but if it was simply throw on someone and refill then continue that is not cheating, putting c4 on team mates is

---

considered to be team hampering and noobish unless the person you put c4 on is the enemy.

If it was noobstories that would make sense there quite a few noobs there.

The map was Field and the sbh would have alot of c4 on them going off. But the people doing it were regulars to the server but i wont name names.

I could deal with it if it were a acceptable tactic but. I have seen someone throw multiple c4 like that. And throwing it that fast was not intended at all.

Hell one time maybe like 3 or 4 days ago we was playing a map. And nod had most of our building destroyed but the WF. And one of the players on our team i don't remember who wanted the map to end.

So to stop people from repairing the wf he used the c4 thing to cover the MCT.

Before i forget can someone plzz move this topic to the renegade forums i posted in wrong one.

It's not cheating. It could be seen as bug abuse, though, if really wanted.

By doing a certain key combo, u can enter the PT while looking away from it. Then you can do 'E' - '5' - 'left mouse button' very quickly and u'll refill and throw c4 very quickly.

For flaming apc u don't really need this anyway, u can just as well throw some c4's on there normally.

It's not a "noob" tactic, most "noobs" don't know how to do it. It could have been either server,

---

because I know it's done on both Jelly and n00bstories.

Ow and btw: lone001, lately u've been replying a lot to technical support questions and most of your answers are half or completely wrong. If you don't know what you're talking about, it would be wise to not reply.

What is wrong with these ones around 50% is wrong 50% is right and I don't quite remember being wrong lately...

And also you just made a mistake it's "Lone0001" not "lone001"

Hmmm seems like I mixed u up with someone else. I'm sorry for this. I checked and u do indeed tend to help out people with correct answers lately.

I should have checked this before, so again sorry.

I tried what Giztow said i probably didn't do it right but i get the gist of it.

---

If this is what they are doing it doesn't speed the throwing speed up. What I watched people do in the past is a lot faster. They would stand by a pt and a steady super fast stream of c4 would shoot out.

If they are just doing refilling fast, and not increasing the c4 throwing speed. Then that isn't too bad I guess not like I could do anything about it anyways lol.

Some people can just do it very fast... Maybe they have some kind of small macro for it as well. Compare it to a mouse button which you can configure to do a keystroke. Every time you hit that button, it does E-5-<shoot> . Not saying they are using this, just saying it's technically possible.

I'm sure you can make a macro and use a special mouse/controller. But there is a limit to how fast you can throw c4 no matter how quick you are.  
And I have seen people literally throw what looked like 15 or more in about a second.

Unless you people know how to speed the c4 throwing speed...

Go to a PCT and press "E" then "5", "E", "5", "E", "5", "E", "5", "E", "5", "E", "5", "E", "5", Very Fast.

Yeah i tried this and its true that i can refill very fast. But i still can't throw as fast as i can refill.

There is like a 2 second wait before i can throw c4 again.

I don't know how people can throw c4 that fast without using some bug or hack.
