Okay I have renX and I got that W3D importer and I followed the install instructions and sent it to the C:\gmax\gamepacks\westwood\ folder and I overwrite everything just like it said and it does not work. When it turns on it says Renx - W3D modular edition and when I go to file--->Import the W3D option is not there so can I have some help or guidance?

I don't have the script downloaded, but I'll show you anyway...

Okay nothing happened, I went to MAXscript---->Run script and I selected the script (something like "Renx-WME") and no icon showed up and nothing else appeared in the import menu. So what is wrong here?

I've noticed it does that, you will have to mess around with it a bit.. It's tricky to get running..

The Elite Officer wrote on Fri, 08 February 2008 11:07Wow lol, MSwindows you are pretty lame.... Dude, just because you know how to do it doesn't mean you should call him lame, instead maybe YOU should answer his question.

---

Customize User Interface->Main UI->Click drag "Import a W3D file" onto the main button tool bar.
