How is this performed? I want to make a stone block with lots of cracks and deformations on it without having to do it with polygons.

I know you can do a lot more with a normal map, as you can specify X, Y and X coords compared to just depth in a bump-map, but do normal-maps lower the FPS more (than bump-maps) in Renegade?

Normal maps do lower the frame rate more than the bump maps applied in RenX. This becomes obvious at higher resolutions (on average computers that is).

Doesn't anyone know? I thought most of the Renegade 3D enthusiasts knew how to apply one.

For normal maps, you'd have to use shaders (can't make normal maps in RenX).
Follow this tutorial:
<http://www.renhelp.net/index.php?mod=Tutorials&action=view&id=111>

For bump maps, follow this tutorial on water, the same technique can be applied for other materials:
<http://www.renhelp.net/index.php?mod=Tutorials&action=view&id=42>

Your normal-mapped stank doesn't look any different from the normal Stealth Tank.

EDIT: file:///C:/Program%20Files/RenegadePublicTools/HowTo/W3D%20Tutorials/content/vertex_material.htm

Look at circled area, the normal map is more obvious there:
