[View Forum Message](#) <> [Reply to Message](#)

Anyone know how to create a custom menu screen with a different layout than the old standard/stock menu? :/

~Zack

I am sure you have to do some work in shaders.sdb.

Negative, shaders have nothing to do with it.

True, but the second you edit it, you can say goodbye to Game.exe :v

Just because it's in there doesn't mean you need to edit it.

Just because it's in there doesn't mean you need to edit it.
I mean in VS 2005, File > Open > File....
Strings "128" Gives menu layout. Re-arranging them, for some reason, stops it from working.

Doesn't seem to actually change the menu layout for me, but still a good tool though
EDIT: Not on the main menu anyway, cheers m8.

Gen_Blacky wrote on Tue, 26 February 2008 01:05I think slave used it to make this one but im not sureThis is just a replaced Renlogo, some stuff removed by empty dds files and a new background image.

BTT, the text can be changed by editing the strings.tdb=

He doesn't have vsync turned on, so it allows the game to rocket up past 80 75 60 or what ever
your desktop's refresh rate is set at.

You need to edit the if_back01.w3d file

Ive edited the if_back on several occasions and....man thats a pain in the ass.

The only real tip I can give you is to don't try to make it shorter or longer, it must be however many frames it is by default.
