i'm sorry if this is kind of a stupid question but i need to know how to get my server to become
co-op. here's what i already know:
where to get the mod
put it in westwood/renegadefds/server (i think)

but when i click on the renegade co-op thing it says you need a working folder i need like step by
step instructions on how to do this please and thank you

dont try stuff if you dont know how to do it
start small and become big.

And one learns by...?
It's a little more complicated then dumping, I will write a small tutorial soon enough...

I learn by doing, guessing and failing until I succeed, and any engine bugs that I find or anything
else along the way, all the better.

I understand that, but he needs a lift, as he "seems" new to Renegade (obv), you learned C++ from a soruce, right? (Not trying to be offencive in anyway what-so-ever).

Correct, but keep in mind I was new to renegade at one point in time, and I didn't have the forums to come to (lack of internet), but I taught most of it my self. But it is true that having others help you probably accelerates the process about 6 fold.

Until SSCoOp is completed(couple months[~2] of development to go :v), there won't be an up-to-date Server Side Co-Op. The current CoopBeta 2.25 is based off of a much older Scripts.dll.

Coopbeta is Fun
im running is with SSAOW support, for NR poeple thats Beta 7.
if you wanna host Coopbeta then just install a FDS, install Zunnie's CoopBeta 2.25 and run NR beta 7 on it.
and all will work well

it needs to be in your Server files Folder.
for example if you installed renegadefds as default, your server folder would be.

..../RenegadeFDS/Server
