Hi,

a basic level edit question.

I played around a lot with RenX(gmax) and w3dviewer.
I've extracted all textures from Renegade and stuff.

But i dont get LevelEdit working.

After installing it, I dont have any presets like shown in picture below.

Which files must be there in what directory??? There should be trees in the presets-tab, I guess...

Is it an Installation problem???

If you have first decade you need to fix the registry so level edit can open the always.dat

Ahhh you are using that xp theme:

Royal Noir and Noir

These forums should be moderated more, once a question is answered, locked. Otherwise we get

off topic posts >_>

I disagree, people should have a freedom to discuss about question.

going back on topic

Just go to your "Command & Conquer Renegade(tm)" folder and remove the "(tm)" from the name. Then try opening up Level editor.

OMFG, there was just a BACKSLASH missing in the Installpath of the registry!

Thanks!

****>>

uhhm, just some hints to insert some from the nitromod extracted betavehicles into regular renegade-maps? e.g. the buggy?

got it working.

OMG, is this pretty cool!!)

ok, 1 question agin:

where and how to insert my own purchase-terminal-icons, so i'm able to buy the vec on PT?

actually i've just inserted the vec into the map.

I want it additional in the extras with icon (fnkqrrm).

actually i've just inserted the vec into the map.

I want it additional in the extras with icon (fnkqrrm).

good ping anyway the icon hasto be a .dds file then to add own pt icon go to

then click Nod Vehicles Or GDI Press Temp Go To Empty Space And if want it in extras click Vehicles NOD Secret Or GDI Secret and add in there

there it says puticonhere.dds put the name of the tga file there or dds file there with .dds on end of it name it add object add price name new temp file and click ok then its done save map go on

game and test it should look like this but your icon

It's the Renegade beta buggy, which I also included in RP2.

got it working.

I've inserted some nice beta-models into C&C_Islands.

My plan is now, to make on this map two more Islands.
On the additional nod-Island there will be the BIG Beta-Nod-ConYard, on the GDI-Island the Beta-Refinery.

Both just for decoration, Players will not be able to go there.

But I have two problems:

1. My old Nod-Beta-Conyard (w3d-File) appears in the middle of the map, while adding it in LevelEdit. Its not selectable and I cant move it.

2. How to make the 2 additional islands? if I import des map-w3d-file into gmax, all textures are lost.

Was the TOW launcher made by WW?
P.S. Where did you get the other two models from? I'd like to get hold of them.

Nice you pm'ed me this also.

ONLY the MOST right is A WESTWOOD HUMVEE.

Please read the readme files that come with the hummers.

The most left is from the old command mod.

The middle one was made by sgtmay. (towhumvee)

And the most right is from westwood.

Anyways rrutk here a question ->

Is only one model for the beta or both?

A=Both models are beta

B=Only the Refiniry

C=Only the Airplane

If anyone of you needs the models go to the beta thread it is just in the mod forum ->

<http://www.renegadeforums.com/index.php?t=msg&th=23692&start=0&rid=2> 2503

Or give me a ring

[View Forum Message](#) <> [Reply to Message](#)

as I know, the refinery is westwood-beta-stuff to, like to old silos.

because they are both in the buildings-file-package released by westwood.

also there are old repair pad in it (nod & GDI).

what's with the conyard? is it original WW?

Not that I know but indd both are beta stuff

EDIT: The one in renassets is. (there is no rep bay with it)
