Yeah, Renegade crashes on exit. Nothing new. Either use task manager or the "Exit" console command whilst in a game.

Some time ago I found out that if you install Renegade before Windows XP SP2 this problem

doesn't occur.

So XP--> SP1--> Renegade-->Sp2-->other updates.

To decrease Renegade crashing you can turn details all to low and resolution. But alot of people don't find this playable.

And I guess the exit command is only supported if you install addons into Renegade? eg corepatch or whatever its called.

Scripts, yeah. 2.9.2 is stable, but for most people 3.4.4 is OK.
