I want to put a lot of the Reborn weapons in Renegade just for the fun of playing Rene with the Reborn guns. I want the nod GAU-3 to replace the Renegade assault rifle. I extracted w_nodr.w3d, w_nodr_b.w3d, and f_gm_nodr.w3d from the Reborn always.dat (yes I realize I haven't extracted reload animations and such yet, but I just wanted to test with these three). I renamed them w_rifl.w3d, w_rifl_b.w3d, and f_gm_rifl.w3d respectively, and put them in my Renegade data folder along with w_nod_rifle.dds, which I also extracted from Reborn's always.dat.

When I start Renegade, the second the map finishes loading it crashes. Any help?

maybe, the engine cannot proceed high resolution textures?
or may be incompatible ammo.ini settings?

You cannot simply rename W3D files. You will have to import them into GMAX and re-export them.

Better yet, get a hex editor and replace nodr with rifl

if you don't want to reexport you can set up the gun in level edit with original reborn .w3ds or hex edit the w3d

So in hexeditor you have to open a .exe file, that has to be game.exe? I would like to know how the program actually works. And how you can replace the .w3d names. Thnks

never mind, its explained in the other topic

Woo hold on people.

You do not have to rename the files for them to work in Renegade, just locate all the files needed for a weapon and just dump them in /data, things like the rifle, pistol, sniper rifles and a dozen more will work fine.

The Reborn only weapons like the uzi will not work, as the file names don't match up, these "Reborn" only weapons will have to be renamed and whatever else.

I been using Reborn weapons in Renegade for like forever.

All you need first is xcc mixer.

Extact all the weapon files from the Reborn always.dat and sort the files needed for a weapon into a folder, once you got them all, drop in the /data, test in game, if something is missing, like a texture, then go find it.

I would release my Reborn weapon files, but due to me being a staff member, the guys want them to be renguard ready as well so can't till that is done.

The Nod rifle uses a custom animation. The GDI rifle use the renegade one.

The Spas-12 use the Renegade animation and so it is possible for that weapon.
