Hi,

I want to use renegade in a network setup with 25 or 30 pc's. Is multiplayer LAN play stable with Renegade. I need the experience to be uninterrupted with hitches and I have never used renegade on this scale before.

Thnks

Shouldnt be a problem, I actually think you would be able to host a 127 on a LAN, where if it was to be online the server would crash.

Even on a LAN it's recommended to still have a dedicated server running though.
