This my current dsl speed plan ok the website '
3000-6000 / 512-768 Kbps

now ingame i know theres 2 commands

set_bandwtih or something
and sbbo

i think i messed something up cause i got 600 ping for a while when nothing running and never had this high ping in over 8 months so

inagme when i put in these commands...what should i put

6000000?

Go into the account settings and set your connection to LAN/T1. It should be fine after that.

Cmatt is right. Still, even if it was on 56k settings you wouldn't get a 600 ping. Did you try on different servers?
