I got Scripts 3.4.4 for TFD Renegade so I can use some mods (Westwood musueam and Roleplay 2) but when ever I start renegade it says "Unforunatly, there was an error loading scripts2.dll. Please report this bug!". Can anyone help?

Did you use the official scripts.dll 3.4.4 installer, or did you try to install it manually?

If you installed it manually, is this the first time you installed custom scripts? If so, did you rename scripts.dll to scripts2.dll before extracting all the extra dll files?

I used the Official installer but the install path was wrong so I moved all the files into the right spot. I havnt installed custom scripts before but there was already a file called Script2.dll in the dll pack.

I think the installer has something to do with this. Use the installer and point it to the right directory and overwrite the files.

I just tried that but I still get the error, I also tried to install everything into a seperate folder amd then changing the Scripts.dll into Scripts2.dll. Renegade starts when I do that but now I cant see anything!

Maybe your video card is old and doesn't support directx 9? in this case you'll have to use scripts 2.9.2 which is the latest stable version before scripts 3.x which use directx 9.
