
Subject: Character will not Move or respond to actions.

I am using the latest version of *Renguard* (1.0323). I am able to get into the game, but for some reason my character will not move for some reason. I tried smashing the keyboard in every possibly way to get it to work but nothing makes my guy move. I can not even talk in chat when I enter the game. I end up just sitting there and having to Ctrl. Alt. Del. the game. Any suggestions on how to fix will be greatly appreciated

You wouldn't happen to use the numpad to move?

Nope I use WASD to move. I'm definitely not stupid enough to have NumLock off and use the pad lol :S

Did the problem occur right after installing (so before installing Renguard, core patches, ...) or after this?

After I was able to play the game fine for about 2 hours. Then next map it loaded my guy just could not move. Like it's so bad I can't do anything. The mouse won't even move the guy.

That's some very strange stuff... i suppose it's all servers? Did you try playing in windowed mode? If the game window is "deselected", you could easily select it in windowed mode.

1. Ya it happens on all server unfortunatly
2. I have no idea how to play in windowed mode.
3. How would i go about selecting it

Thank you very much for the help so far by the way !!!

I mean in your renegade directory, there's a file called wwconfig . Run it and there's an option that you can tick there called windowed mode.

I have to go now, I hope it can help you.

you know, this hapenned to me when i tried to do it for the very first time, because pccillin (my antivirus/firewall) makes a pop up where it asks you if you want to allow this program to connect to the internet. what i do to combat it is i keep a folder open, then alt+tab out of the game then click yes on the firewall popup and it done. i have to do that for every online game, when connecting for the first time.
