[View Forum Message](#) <> [Reply to Message](#)

I'm currently having trouble getting BRenbot to work. Whenever I open it up and it connects to IRC it says that it is unable to connect to the server. The actual message is: "[BR] Warning: The FDS has not responded to the last two status requests, it may have gone offline."

Here is a screenshot:

Can anyone tell me why this is happening or how to fix it? Thanks in advance.

Try running the server and BrenBot.exe in Admin mode and XP compat mode

Match the Remote Admin Ports..

Well unfortunately, even after matching the admin ports and trying to run it in compatibility mode as an administrator, it still is not working. Do you have any more ideas? Should use a specific port or ip or what?

Try reading the readme file, relevant section quoted with highlighting added for emphasis

"BRenBot readme.txt"Step 1.
Open your server.ini in RenegadeFDS/Server

Step 2.
Locate the following options and set them to the values given here

```
AllowRemoteAdmin = true  
RemoteAdminPassword = yourpass  
RemoteAdminIP = 127.0.0.1  
RemoteAdminPort = 4949
```

Note: The lines with a ; on the front are NOT the actual options, and not where you put these settings. It is recommended that you change the pw option to an 8 digit password of your choice.

Step 3.

Open your brenbot.cfg file in RenegadeFDS/Server/BRenBot

Step 4.

Locate the following options and set them to the values given here. These should normally be set for you upon install, but check them anyway.

RenRemLinuxHost = 127.0.0.1
RenRemLinuxPort = 4949
RenRemLinuxPassword = yourpass

Note: If you change the password in server.ini (step 2) you MUST also change this password to match it.

I've already tried those settings too and it still didn't work.

in server.ini, have you tried spelling True without the capital T on the AllowRemoteAdmin option? While you wouldn't expect it to make a difference, you never know...

I just tried that and unfortunately it didn't work either. In fact, when I started up the bot it also came up with another error saying "port: 25300, server: error 10048 creating socket: unknown error"

Would it matter if I had installed Resurrection before making sure the bot worked? and if Resurrection was causing the problem for some reason how would I get it to work with the server

and bot?

Error 10048 indicates the port is already in use by something else, try using a different port number (changing it in both the FDS and BRenBot settings)

[View Forum Message](#) <> [Reply to Message](#)

Well I changed the port to 25301 and it fixed the error 10048, but BRenbot is still giving the the error about the FDS not responding, even after changing it to a lowercase t as you suggested.

Also, I forgot to mention that from the very beginning it's always been having trouble finding the correct log files and for some reason they aren't being created so I have to go into the folder and rename an old one or create a new one myself, would that have any effect. Do you know if resurrection would have any effect on it?

[View Forum Message](#) <> [Reply to Message](#)

I don't know if resurrection has an effect on that, but if the FDS is not writing renlog files, then brenbot has no way of knowing what's going on in the server, which is what causes that 'FDS is not responding' message.

I think I found it....what was happening was that I had installed the FDS to one location but I had to move the FDS folder for some reason, and so the FDS kept writing to the old location, not the new one, which is why BRenbot couldn't find the files...

I'll have to check it out tomorrow and make sure it works. Anyway, thanks for you're help, and I'll let you know later if it worked.

Well I got it to work so now BRenbot can detect the FDS. However, I host the server on a different log in name (for the computer itself) so that I can play Renegade as well as host the server, but when I switch users to play Renegade it disconnects me and the bot from IRC. Also, how do you get the moderator status to work correctly, and if I turn off half-renguard mode will some of the RG commands still work, because for some reason when I run resurrection I can't run Renguard. And lastly, how do you edit things like the vehicle and mine limit for each map?

However, I host the server on a different log in name (for the computer itself) so that I can play Renegade as well as host the server, but when I switch users to play Renegade it disconnects me and the bot from IRC.

No need to switch users, just add +multi to the shortcut target for the FDS and for Renegade itself.

meddling1 wrote on Tue, 08 July 2008 00:34 Also, how do you get the moderator status to work correctly, and if I turn off half-renguard mode will some of the RG commands still work, because for some reason when I run resurrection I can't run Renguard.

Read the readme.txt file, specifically the part about moderator authentication.
