hey im having a bit of a problem.. i have a legit cd key and all that but my router is a piece of shit so i cant get it out there so im trying to make it a lan server instead so if anyone could give me an idea how to set it up to work through lan it would be greatly appericiated ...

thanks

I imagine this will lag to hell, try [www.portforward.com](http://www.portforward.com) - that might show you how to allow certain traffic through your router.

Or, do what I plan to soon, buy a new one.
