Say, is there a way to set a vehicle's weapon in C++ (serversided)?

you can with text cinematics,

Buggy with laserrifle, pic, obigun FTW!

You need to change the weapon with 1,2,3,4 etc.

In c++ you could try with `Grant_Weapon(vehicleID)` thats how it works in text cinematics, but it wont show the shoots serverside, just the host can see diffrent shoots
