I have a problem with packing mix maps in LE. It doesn't pack additional dds-textures & .w3d models into the mix-archive. Adding the missing files via RenegadeEx fails because the mix archive only uses files which are packed via LE.

I put the files into the following directories. Originally they were all in the Levels-dir.

/C&C\_MapName/  
../ALWAYS/  
../Characters/  
../EditorChache/ <=put my additional textures in here  
../Levels/  
../presets/

The additional .w3ds (TOW-HumVee etc) are in the main directory of my map (below these dir's)

How can I force LE to pack everything in the mix archive? I can't pack it as .pkg and rename it to mix because the temp-weapons/ammos/explosions doesn't have the right damage then.

Use XCC to mix in the required files.

I would give you the link to it on game-maps.net but the site is down at the moment, need to wait for IronWarrior for it to get back up.

I attached xcc to this post in a rar file, use that to drag/drop in the files you need in the mix.

Thx Zunnie.

Somebody already told me the solution. There is an option for this in LE which can be found Edit => Include.

Close^^
