Hey, I have recently been having problems with my renguard client and I can't play Renegade.

The problem is when I try to start Renegade, I get an Error box come that says "Error Code: 00000005" and I need help.

Any help will be appreciated.

That is not correct. Renegade works fine with Vista, but renguard apperently doesnt. (anymore)Staff of Renguard should be making a patch for Vista because Windows XP will have production ceased in 2009.

RenGuard is "soon" to be replaced by the TT-patch anyway.

Yea just don't use RenGuard a lot of servers these days don't care a whole lot about it, it's just the annoying noobs in the server that think you cheat because you can kill them and just happen to not use RG.
