I recently started using a few skins from <http://www.game-maps.net> and i don't think they are allowed through rg. Also sometimes my rg is buggy so for these reason i made a shortcut from game2.exe to desktop.

When i don't want to deal with the rg bugs i just start my game from this shortcut. Well a few days ago i was playing like this rg was not running.

I was having a good game with decent kills and someone tried to !forcerg me. Im not complaining but the server read i was using rg and no need to !forcerg.

I ha vent been forced since so i don't know if it was a glitch or a one time thing. But i was wondering just out of curiosity what was going on.

Yea it's a common bug it mostly happens the other way when you are running it and it detects you aren't but sometimes the bot can detect you are running it even though you aren't, I'm guessing the bot was Brenbot?

EDIT: About the first thing, not all skins are allowed through RG a lot aren't and it seems recently some skins that have worked are being blocked for some reason and the RG coders don't seem to know why also.

Maybe an outdated version of brenbot running on that server?
