So i just did a school project.

I managed to create a alternative hotmail live mail mailserver box.

http://www.exdeliver.com/index.php

Feel free to try it out!

What do you think about the logo?
I just made it up pretty random.

Very nice.

What I wonder is did you write the PHP code that's behind it?
Where is the info saved in a MySQL or SQL DB?
So in short I am intrested in the working behind it. And not the functionality on what you can do
with it because I prefer the technical stuff.

2 other things.

1. beneath the page it says copyright 2007 should this not be 2008?
2. Your company once had a 1 year free domain.nl offer is this offer still available?

Thanks

I scripted a lot of it, used a few sources and managed it to connect to my mailservers SQL db.

The offer of .nl domain names do not count anymore.
It was only a offer of 1 month.

And no i dont steal hotmail accounts.
The service is free. I think you should try it since its very effective and hell its quick.

Also try out the support, i kinda made my own ticket support system.

also its 2007 because i used the template of my website
tiberium-planet.com

He used a mail app called RoundCude.
Their wiki should answer all your questions about it.

please note that roundcube is nothing more then a mailclient

it has nothing to do with my service. ppl just can use it as i can add squirrelmail and horde.
