OK I'm sure some of you guy's know of the windows logon screen well a guy made a renegade logon screen for windows xp. i have been trying to years to get it to work well i got it.

There is a program called LogonStudio The files I'm uploading are 3 different ones.
1.logon studio
2.renegade_xp_login zip, now this one is the hard one if you can get it to work than have fun, and you wont need to install logon stuido.
3.Renegade Logon XP exe , this one i converted so it will work in logon studio if you can't get it to work that you can always convert the 2 file to work.
I will also give the preview of it, for the people that don't know what I'm going on about.

i can't upload it here so stay tuned for the file.

OK i got it.
Logon Stuff

Any comments?

I'm working on a Bootskin and making it look some what like that.

Would anyone care if i took wallpapers and made them bootskins?
the maker would be the author of it.

Pretty cool. Too bad I never use the login feature and am on Vista.

I'd use it if I had XP though, nice job.

Finally someone eliminates the ugly *spew* blue logon screen. I now have a reason to stop using the standard windows 2000-style one.

What dll/exe do I need to edit to replace the boot splash? I've been wanting to replace it as a prank on my 'windows is the only operating system' parents.

ok there is logonstudio for vista i think.

And I'm sorry to say but i will say it again i did not make this log in screen some other fan did but I'm learning how so i can start making them.

dthdealer:if you make that pick 640x480 i will make you a boot skin for that. now the boot skin's I'm making are going to have nod gdi what ever but windows xp can't handle anything that is above 16 4 bit crap so the boot skins are not that cool but you should see some of them that people make.

oh dthdealer i will try to make the boot skin for you and test it out.
and i need to know what you want for the loading bar you know the little blue bar that is under window's.

Going to look for wallpapers to convert to boot skins and try to learn how to make log ins.

oh u6795 do you got msn or xfire? so we can see if that log in works on vista i think they all work the same.

i don't have vista so you guy's will have to let me know if the log in works so let me get the program.

so I'm out.... for now

update:
Hows that look u6795?

Here is the matching boot skin to that log in my way tho

And here is the vista log in studio
does anyone have a place i can upload this file?

Its strange how the standard windows boot screen is allowed to have a higher colour count than custom ones.

Distrbd21 wrote on Fri, 10 October 2008 07:53i have been trying to years to get it to work well i got it.Who on a computer with one user account only uses the logon screen?

Here's a quick tutorial how to replace the bootscreen on XP=

Edit boot.ini -attach the following at the end of your boot string. Mine looks like this=

.../noexecute=optin /fastdetect /usepmtimer /bootlogo

Choose a Renegade wallpaper or whatever you prefer to use. To get a custom static boot picture, it has to meet the requirements=

-640x480 + 16 colors only.
-It has to be a Bitmap (.bmp) and also has to get the "hidden" attribute activated.
-It stays in C:\Windows or whatever/whereever your %windir% is.

So before converting a picture, reducing the colors and see how it's becoming crap, think of "greyscaling" it. This looks way better than a comic-like picture.

BTW, Logan looks gay!

To:EA-DamageEverything

That is not realy a safe way of editing you xp or whatever you have.

The programs i use is the safest way to edit your windows.

It only mask's stuff does not edit it so for a user that is new to windows and don't know how to works does not fuck up there xp or whatever they run.

To:TehstormZ and SSnipe: I'm not but some people like it i don't use that ren log in screen i use different ones it is endless what people out there make.

and the guy who made his computer the hand of nod is obsessed with the game.

To:everyone else i will get site's up here of the boot skin's and log in screens for you guy's.

Other than that fuck who ever dis's this topic.

I'm out for now.

Me...

I don't know why it uses the Welcome screen... it never used to. I don't know how to disable it.

Do you have a password set? if you do it will not log you in without giving a pw.

And im only one user on this computer but i have different accounts on it.

I have no password set. What happens is I get a welcome screen with my 1 and only account name listed. I click it and it logs me in. No password or input required... just click and log in.

lol can't help you there, try making a new account than delete that one.

Here is my 1st log in screen.

What you guy's think?

You can set a auto login account using Tweak UI. I think there is some setting somewhere by default as well, but I don't know where to find it.

No, that wasn't my goal. lol I was trying to assert the idea that Marines > Army.

Thanks though.
