I have a system and all this crap hooked up to my tv. Way to hard to explain even if I tried. The point is that my speakers out of my system make this screeching noise when you turn the volume up to amount and I dont know how to fix it. Can anyone help me? If they need to know my system hook up or a recording of the nouse, just ask.

Get better speakers

TV speakers usually aren't that good, even in the newer TVs.

Oh computer speakers I thought you said Tv speakers...

Yea usually if you hear that sound it means you have put the sound up too high(obviously) and possibly that the speakers might need to be replaced soon.

No it is speakers that use this type of wire.

<http://images.google.com/images?q=speaker%20wire&ie=UTF-8&oe=utf-8&rls=org.mozilla:en-US:official&client=firefox-a&um=1&sa=N&tab=wi>

But thats not whats causing it

I changed it around and my pc is plug into my switch box (via stereo to rca) and it makes little noise I can barely hear it but once i turn the volume up full blast with no music playing. I hear that weird noise And along with that my dvd player is plugin the switch box and the noise is really loud when i select the input its plug into if anyone wants recording video or audio that can help please ask
