Well, not much of a stun gyn but made it before and its cool.

As shown here

<http://www.i-hacked.com/content/view/181/48/>

My question is how can I make the voltage stronger? I dont know anything about electronics like this....Like a noob first thing I thought was put 9v battery then a double A

When I was in middle school, I got suspended because I built the ion ray gun in this kit and brought it to school. This was long before Columbine so guns in school wasn't as big of an issue as it is now. But I zapped the shit out of this kid who annoyed me. He was holding on to a metal railing at the time and it worked like a charm!

Why not try making Hydrogen with a car battery here you go kids just don't get yourselfs killed

[http://www.totse.com/en/bad\\_ideas/ka\\_fucking\\_boom/index.html](http://www.totse.com/en/bad_ideas/ka_fucking_boom/index.html)

I really like this website I have been going to it for quite a while now about 2-4 years now and I find it to be very interesting try it.

That looks very cool, the real thing you should be trying is an E.M.P. ray gun!!!!!!!!!!!!!! It can fry the shit out of almost anything electronic like your nobors computer, a cell phone, but the parts are not easy to get as the goverment knows if everybody had ulimited access to these parts than a lot destruction can happen to a lot of parts.

2040!? Are you crazy?

It's been delayed to 2050.

You need to get components to amplify the voltage. I do mean voltage too, do NOT increase the amount of amps. That makes it a kill stick instead of a stun stick.

If i were to make it I would get out ye'old soldering gun and a blank project circuit board.

A simple way to shock people is to find an old relay, wire the coil up in series with it's own contacts so when it turns on it shuts itself off thus turning itself on again. Then use the inducted voltage off the coil. It gives quite a kick, but don't expect the contacts to last very long.

Very unlikely, I hear that the current "Updated.". release date is now 2080 but at least they will be almost finished with it.
