ok im making a small server side only mod for C&C_Islands map, ive found out how to make Normal bots shoot, but i cannot make tank bots shoot, i need help on doing this please.

Also ive seen some servers use modified weapons, for example a Personal Ion Cannon gun which fires and Advanced Guard Tower Missile, or the nod obelisk Laser attack. please can somebody tell me how to do this.

and also what item can i use which is like the large blocker (i.e a large box) but can be seen by players.

Other cool stuff is also welcome ^.^

ive checked there it only tells me how to make the vehicles move, not how to make them shoot., there is no aggravation option under the settings tab of the vehicles whereas on normal bots there is.

Try to attach the script M03_Goto_Star to them.
Or Neo_VEhicle_AI
