Strange one this... Ive been playing ren at 1440x900 for months now with no problems at all.. I goto load renegade and it crahes straight to desktop.. I try to load it again and wwconfig pops up so I keep on trying at the same resolution but I get the same thing so I knock the resolution down and down even more until the game loads... So now for some unknown reason I can't play Ren above 1280x800.

I haven't done anything to the video card or anything like that. The only difference from yesterday is I installed MotoGP 08.

Video hardware and driver version (udpate to latest if you haven't) please...

Edit: Oh, scripts 3.4.4?

GeForce 7900GS 178.28 (latest the last time I checked like a week ago)

Scripts 3.4.4

Try running MotoGP 08, closing it. Then try to run Renegade. If Ren won't start then it's some weird obscure bug to do with that, else, it was random.
