I am not sure what method they used to make the textures alpha blending. I need to know because I am redoing a map. (its not C&C volcano anymore but now Walls)

First i am redoing all the groundtextures after that i focus on the buildings.

So i do it like on the screenshot in my attachment.

1 mesh with 2 passes in material

Pass 2 the basic texture is the metal with lines you can see in my ss

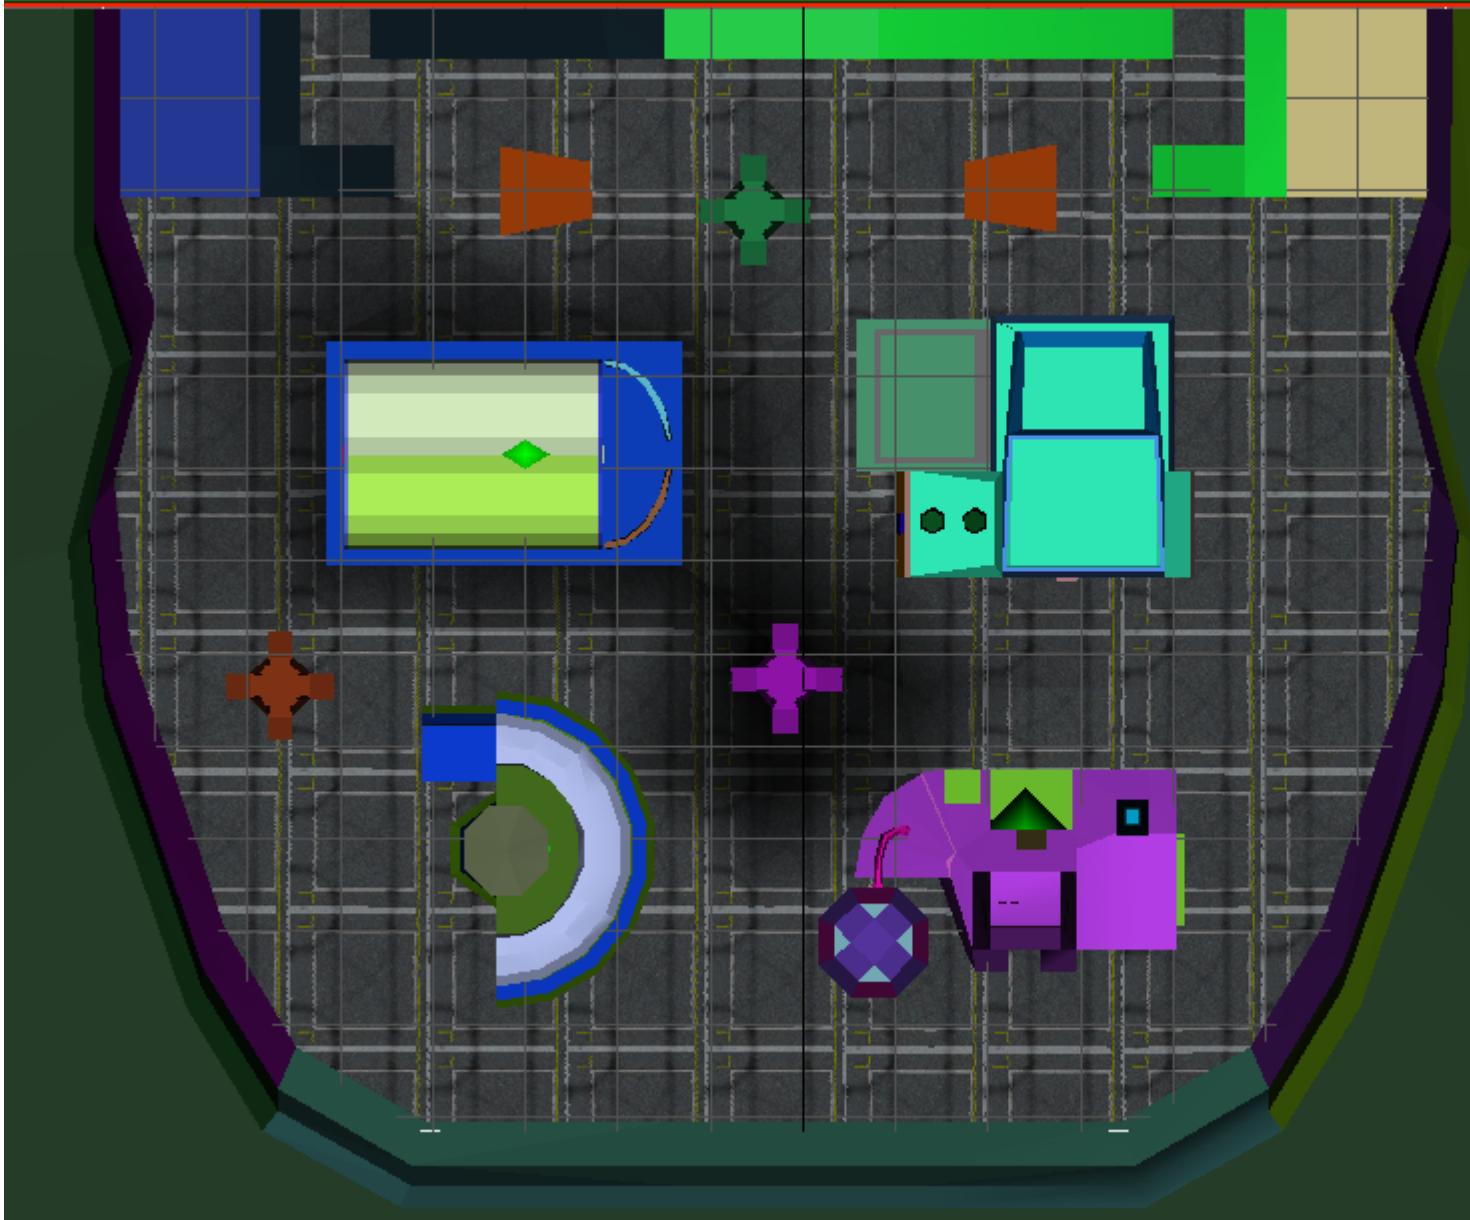

Pass 1 the texture i want to paint with is Snow.

So the parts i paint black with Vertexpaint are going to be snow.

Did westwood did it like this to? Because this method is very time consuming, hopefully there is an easier way.
