Since i planned to start a webhosting company KVK certified.  
I wonder, what do you think what is a good service?

Server specs:  
Intel xeon quad core.  
16GB ram Kingston  
32 X 16 SSD drives  
1GB uplink connection

I have a directadmin lifetime license.

What would you like to see? what are good euro prices?  
What is a good customer service.  
Share it with me.

What would you move to me as a ISP?

Lets forget me as a character and move in a business partner.  
Since im a professional worker @ the hosting company where i work now, i know what is possible  
what can be done etc.

Just some opinions, what should my company do better then the currents ones.

- Support ASP.NET (2.0/3.0/3.5) & PHP (5.0) on the same server
- Support SQL Server, MySQL, and Access databases on the same server, WITH remote connections
- Support Anonymous FTP Access
- Support unlimited FTP Accounts
- Let me pick whatever I want when it comes to naming my ftp usernames, and creating passwords (no naming restrictions)

After the host meets those criteria I'm not so picky. Having those key features for me would make me switch ASAP. I haven't looked for other hosts aside from GoDaddy yet, but I need to switch. They have way too many restrictions for developers.

Yeah, I agree that grammar is important. But we're talking about mainly a Dutch company here, no? Some slack is fine. I do believe, however, that the better the grammar, the better English speakers will feel about your company.

Keep it professional and keep work ethic high.

My current hosting company replies to my support tickets even at a Sunday evening, 22h. I doubt you'll do better than that .

I should be able to handle that, you'll see.

When it comes to your company, you will be very dedicated for your customers.  
I can even promise you, that you will be notified in the 24hours.
