I "edited" a hud i already had, but for some reason, during the extraction process, this happened:

... what happened? anyone know? BTW: i kinda like this "clear hud" thing, so if any of you want it, i will give it to you.

EDIT: if you make the entire image transparent, it will not do this, it will not show anything on radar if you make everything transparent. So, no, this isn't as easy as making a transparent dds file. I had to say that b/c i know some one some where would of though or said it.

Did you save it as the correct DXT type? The HUD uses DXT5 with alpha channels.
